BMI  Lab

Add-on

1

The core offering is priced competitively, but there are numerous extras that drive the final price up. In the end, the customer pays more than he or she initially assumed. Customers benefit from a variable offer, which they can adapt to their specific needs.

Examples:

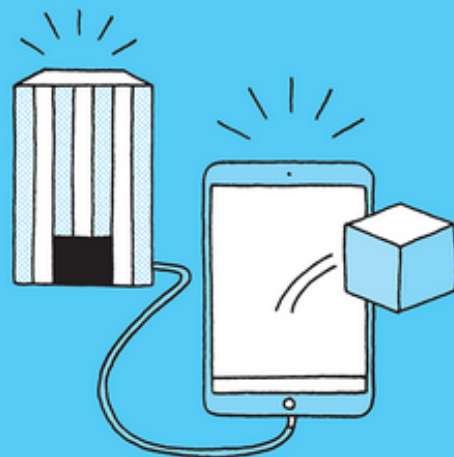

Amazon Web Services

SAP

Sega

Salesforce

Ryanair

Affiliation

2

The focus lies in supporting others to successfully sell products and directly benefit from successful transactions. Affiliates usually profit from some kind of pay-per-sale or pay-per-display compensation. The company, on the other hand, is able to gain access to a more diverse potential customer base without additional active sales or marketing efforts.

Examples:

Marriott International

American Express

Spotify

Airbnb

Dropbox

Aikido

3

Aikido is a Japanese martial art in which the strength of an attacker is used against him or her. As a business model, Aikido allows a company to offer something diametrically opposed to the image and mindset of the competition. This new value proposition attracts customers who prefer ideas or concepts opposed to the mainstream.

Examples:

Swatch

Nintendo

Auction

4

Auctioning means selling a product or service to the highest bidder. The final price is achieved when a particular end time of the auction is reached or when no higher offers are received. This allows the company to sell at the highest price acceptable to the customer. The customer benefits from the opportunity to influence the price of a product.

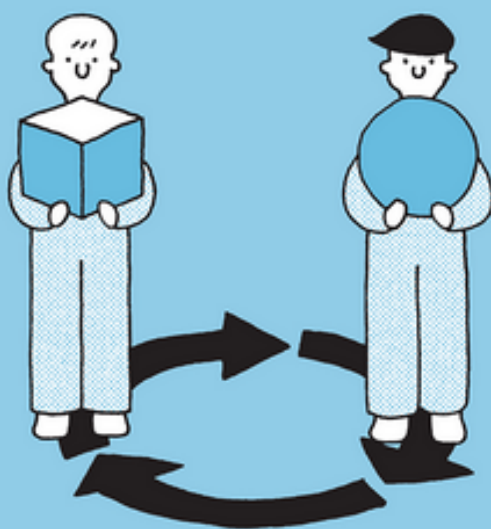

Examples:

Google

eBay

Amazon Web Services

Lufthansa

Barter

5

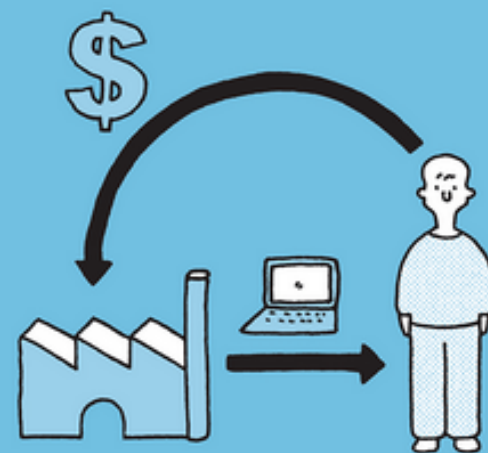

Barter is a method of exchange in which goods are given away to customers without the transaction of actual money. In return, they provide something of value to the sponsoring organisation. The exchange does not have to show any direct connection and is valued differently by each party.

Examples:

Pepsi

Procter & Gamble

Lufthansa

Cash Machine

6

In the Cash Machine concept, the customer pays upfront for the products sold to the customer before the company is able to cover the associated expenses. This results in increased liquidity which can be used to amortise debt or to fund investments in other areas.

Examples:

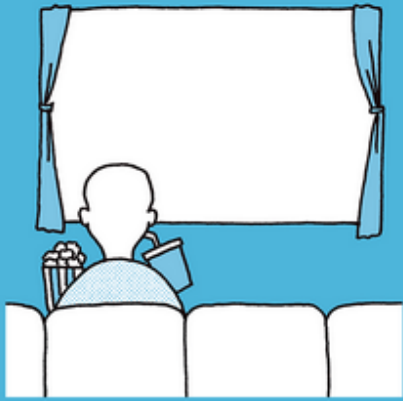

American Express

Amazon Web Services

McFit

Netflix

Groupon

Cross Selling

7

In this model, services or products from a formerly excluded industry are added to the offerings, thus leveraging existing key skills and resources. In retail especially, companies can easily provide additional products and offerings that are not linked to the main industry on which they were previously focused. Thus, additional revenue can be generated with relatively few changes to the existing infrastructure and assets, since more potential customer needs are met.

Examples:

Dollar Shave Club

Lufthansa

American Airlines

Aldi

Flyeralarm

Crowdfunding

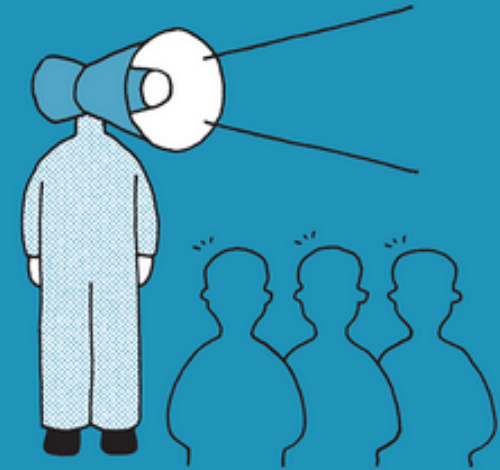

8

A product, project or entire start-up is financed by a crowd of investors who wish to support the underlying idea, typically via the Internet. If the critical mass is achieved, the idea will be realized and investors receive special benefits, usually proportionate to the amount of money they provided.

Examples:

Brainpool

Pebble Technology

Crowdsourcing

9

The solution of a task or problem is adopted by an anonymous crowd, typically via the Internet. Contributors receive a small reward or have the chance to win a prize if their solution is chosen for production or sale. Customer interaction and inclusion can foster a positive relationship with a company, and subsequently increase sales and revenue.

Examples:

Procter & Gamble

General Electric

Cisco

welcome back

Customer Loyalty

10

Customers are retained and loyalty assured by providing value beyond the actual product or service itself, i.e., through incentive-based programs. The goal is to increase loyalty by creating an emotional connection or simply rewarding it with special offers. Customers are voluntarily bound to the company, which protects future revenue.

Examples:

Lufthansa

Starbucks

Marriott International

Airbnb

Walmart

Digitization

11

This pattern relies on the ability to turn existing products or services into digital variants, and thus offer advantages over tangible products, e.g., easier and faster distribution. Ideally, the digitization of a product or service is realized without harnessing the value proposition which is offered to the customer. In other words: efficiency and multiplication by means of digitization does not reduce the perceived customer value.

Examples:

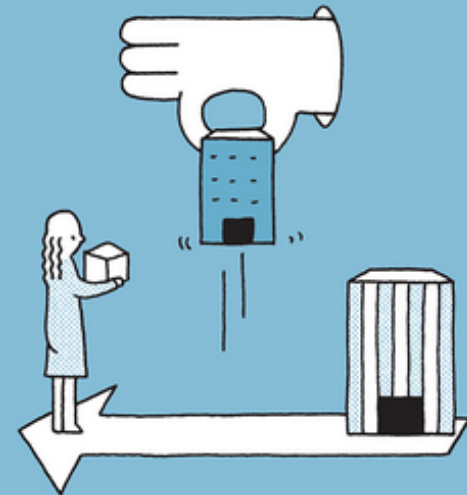

Google

CDnow

Netflix

SAP

Nintendo

Direct Selling

12

Direct selling refers to a scenario whereby a company's products are not sold through intermediary channels, but are available directly from the manufacturer or service provider. In this way, the company skips the retail margin or any additional costs associated with the intermediates. These savings can be forwarded to the customer and a standardized sales experience established. Additionally, such close contact can improve customer relationships.

Examples:

Freitag lab.ag

Ryanair

Dell

Lego

Dollar Shave Club

E-commerce

13

Traditional products or services are delivered through online channels only, thus removing costs associated with running a physical branch infrastructure. Customers benefit from higher availability and convenience, while the company is able to integrate its sales and distribution with other internal processes.

Examples:

SBB

Warby Parker

H&M

Lego Factory

Nintendo

Experience Selling

14

The value of a product or service is increased with the customer experience offered with it. This opens the door for higher customer demand and commensurate increase in prices charged. This means that the customer experience must be adapted accordingly, e.g., by attuning promotion or shop fittings.

Examples:

Red Bull

Rolls-Royce

Lamborghini

Nestlé Nespresso

Starbucks

Flat Rate

15

In this model, a single fixed fee for a product or service is charged, regardless of actual usage or time restrictions on it. The user benefits from a simple cost structure while the company benefits from a constant revenue stream.

Examples:

Apple iPod/iTunes

Porsche

Spotify

McFit

LinkedIn

Fractional Ownership

16

Fractional ownership describes the sharing of a certain asset class amongst a group of owners. Typically, the asset is capital intensive but only required on an occasional basis. While the customer benefits from the rights as an owner, the entire capital does not have to be provided alone.

Examples: HomeBuy

Mobility Carsharing

Franchising

17

The franchisor owns the brand name, products, and corporate identity, and these are licensed to independent franchisees who carry the risk of local operations. Revenue is generated as part of the franchisees' revenue and orders. The franchisees benefit from the usage of well known brands, know-how, and support.

Examples:

McDonald's

Renault

Marriott International

Panera Bread Bakery

Denner

Freemium

18

The basic version of an offering is given away for free in the hope of eventually persuading the customers to pay for the premium version. The free offering is able to attract the highest volume of customers possible for the company. The generally smaller volume of paying 'premium customers' generate the revenue, which also cross-finances the free offering.

Examples:

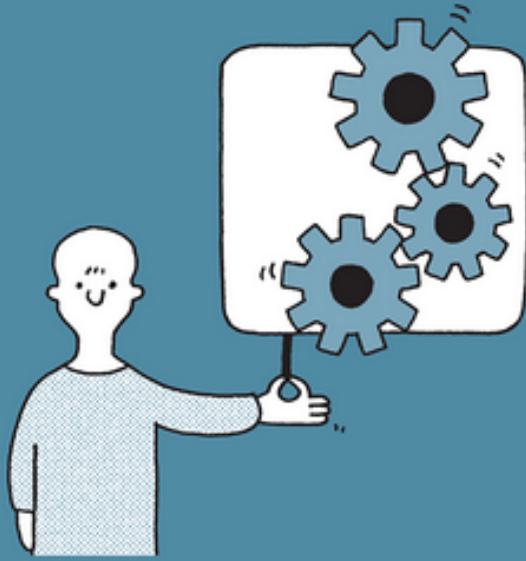

Skype

Spotify

LinkedIn

Apple iPhone/AppStore

Amazon Kindle

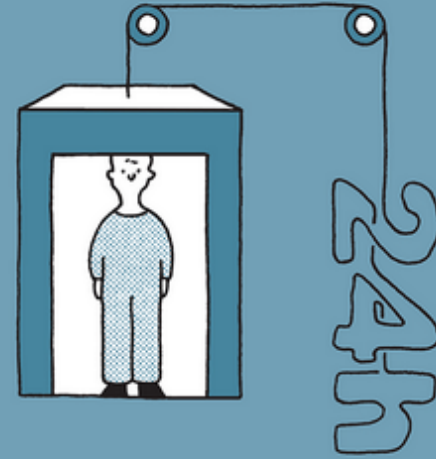

From Push-to-pull

19

This pattern describes the strategy of a company to decentralize and thus add flexibility to the company's processes in order to be more customer focused. To quickly and flexibly respond to new customer needs, any part of the value chain including production or even research and development can be affected.

Examples: Toyota Dell Zara

Guaranteed Availability

20

Within this model, the availability of a product or service is guaranteed, resulting in almost zero downtime. The customer can use the offering as required, which minimizes losses resulting from downtime. The company uses expertise and economies of scale to lower operation costs and achieve these availability levels.

Examples: Salesforce

Amazon Web Services

Netflix

Google

McFit

Hidden Revenue

21

The logic that the user is responsible for the income of the business is abandoned. Instead, the main source of revenue comes from a third party, which cross-finances whatever free or low-priced offering attracts the users. A very common case of this model is financing through advertisement, where attracted customers are of value to the advertisers who fund the offering. This concept facilitates the idea of 'separation between revenue and customer'.

Examples:

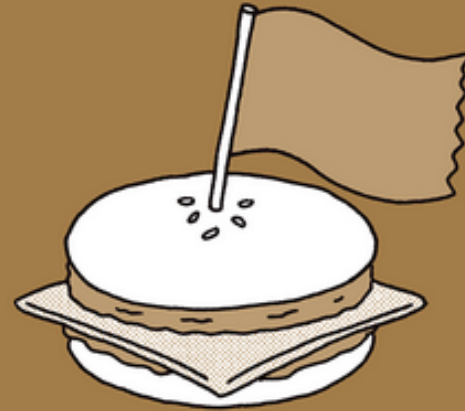

SlideShare

LinkedIn

Ryanair

Apple iPhone/AppStore

Hotmail

Ingredient Branding

22

Ingredient branding describes the specific selection of an ingredient, component, and brand originating from a specific supplier, which will be included in another product. This product is then additionally branded and advertised with the ingredient product, collectively adding value for the customer. This projects the positive brand associations and properties on the product, and can increase the attractiveness of the end product.

Examples:

Microsoft

Intel

Bosch

Integrator

23

An integrator is in command of the bulk of the steps in a value-adding process. The control of all resources and capabilities in terms of value creation lies with the company. Efficiency gains, economies of scope, and lower dependencies from suppliers result in a decrease in costs and can increase the stability of value creation.

Examples:

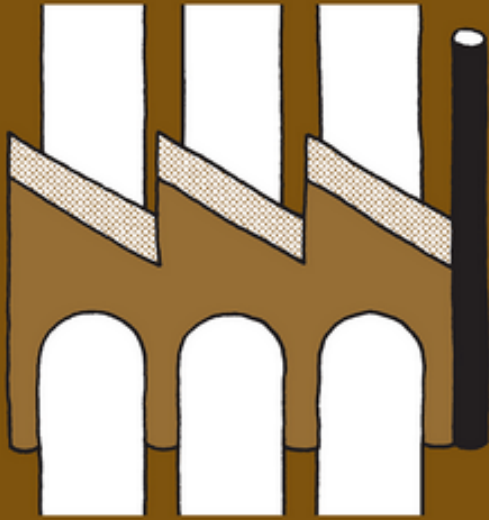

Ford

Lufthansa

Netflix

Zara

Standard Oil Company

Layer Player

24

A layer player is a specialized company limited to the provision of one value-adding step for different value chains. This step is typically offered within a variety of independent markets and industries. The company benefits from economies of scale and often produces more efficiently. Further, the established special expertise can result in a higher quality process.

Examples:

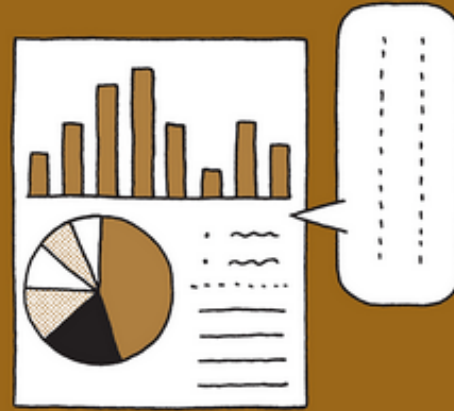

Microsoft

American Express

Payback

Intel

Max Havelaar

Leverage Customer Data

25

New value is created by collecting customer data and preparing it in beneficial ways for internal usage or interested third-parties. Revenues are generated by either selling this data directly to others or leveraging it for own purposes, i.e., to increase the effectiveness of advertising.

Examples:

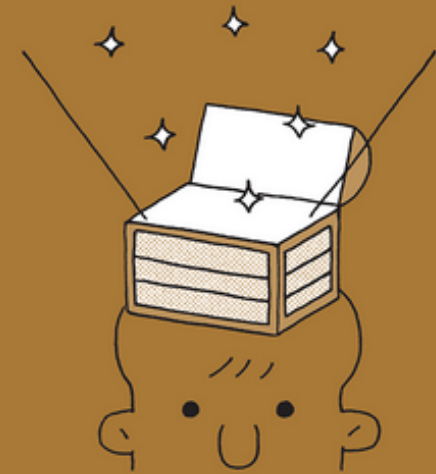

Pinterest

SlideShare

Amazon Web Services

Groupon

Spotify

License

26

Efforts are focused on developing intellectual property that can be licensed to other manufacturers. This model, therefore, relies not on the realization and utilization of knowledge in the form of products, but attempts to transform these intangible goods into money. This allows a company to focus on research and development. It also allows the provision of knowledge, which would otherwise be left unused and potentially be valuable to third parties.

Examples:

Levi's

Google

IBM

Porsche

Bosch

Lock-in

27

Customers are locked into a vendor's world of products and services. Using another vendor is impossible without incurring substantial switching costs, and thus protecting the company from losing customers. This lock-in is either generated by technological mechanisms or substantial interdependencies of products or services.

Examples:

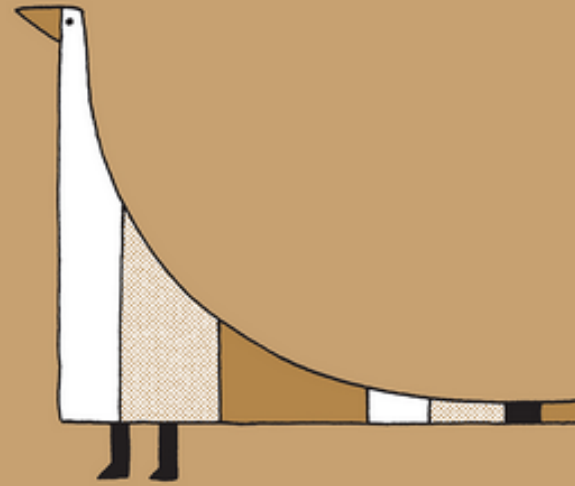

Sega

SAP

Dropbox

Amazon Web Services

Salesforce

Long Tail

28

Instead of concentrating on blockbusters, the main bulk of revenues is generated through a 'long tail' of niche products. Individually, these neither demand high volumes, nor allow for a high margin. If a vast variety of these products are offered in sufficient amounts, the profits from resultant small sales can add up to a significant amount.

Examples:

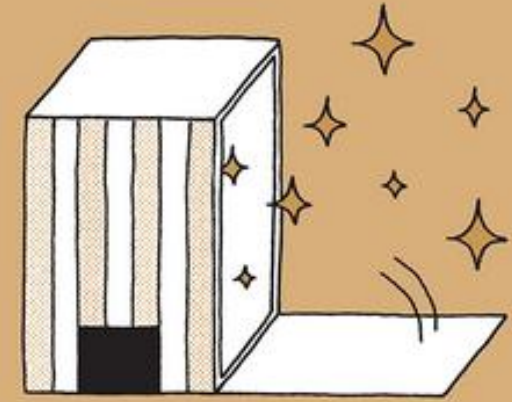

Netflix

Amazon Store

YouTube

CDnow

Facebook

Make More Of It

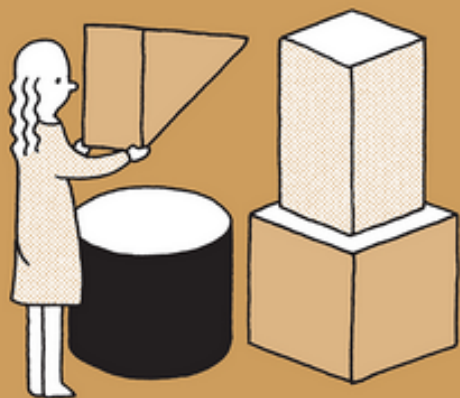

29

Know-how and other available assets existing in the company are not only used to build own products, but also offered to other companies. Slack resources, therefore, can be used to create additional revenue besides those generated directly from the core value proposition of the company.

Examples:

Amazon Web Services

BASF

Mass Customization

30

Customizing products through mass production once seemed to be an impossible endeavor. The approach of modular products and production systems has enabled the efficient individualization of products. As a consequence, individual customer needs can be met within mass production circumstances and at competitive prices.

Examples:

Dell

Lego

Spotify

Subway

Levi's

No Frills

31

Value creation focuses on what is necessary to deliver the core value proposition of a product or service, typically as basic as possible. Cost savings are shared with the customer, usually resulting in a customer base with lower purchasing power or purchasing willingness.

Examples:

Aravind Eye Care System

Nokia

Craigslist

McDonald's

Ford

Open Business Model

32

In open business models, collaboration with partners in the ecosystem becomes a central source of value creation. Companies pursuing an open business model actively search for novel ways of working together with suppliers, customers, or complementors to open and extend their business.

Examples:

Abril

Valve Corporation

Open Source

33

In software engineering, the source code of a software product is not kept proprietary, but is freely accessible for anyone. Generally, this could be applied to any technology details of any product. Others can contribute to the product, but also use it free as a sole user. Money is typically earned with services that are complimentary to the product, such as consulting and support.

Examples:

Mozilla

Wikipedia

Apple iPhone/AppStore

IBM

Pebble Technology

Orchestrator

34

Within this model, the company's focus is on the core competencies in the value chain. The other value chain segments are outsourced and actively coordinated. This allows the company to reduce costs and benefit from the suppliers' economies of scale. Furthermore, the focus on core competencies can increase performance.

Examples:

Groupon

Nike

Richelieu Foods

Procter & Gamble

Pay Per Use

35

In this model, the actual usage of a service or product is metered. The customer pays on the basis of what he or she effectively consumes. The company is able to attract customers who wish to benefit from the additional flexibility, which might be priced higher.

Examples:

Car2Go

Mobility Carsharing

Google

Flyeralarm

Deutsche Post

Pay What You Want

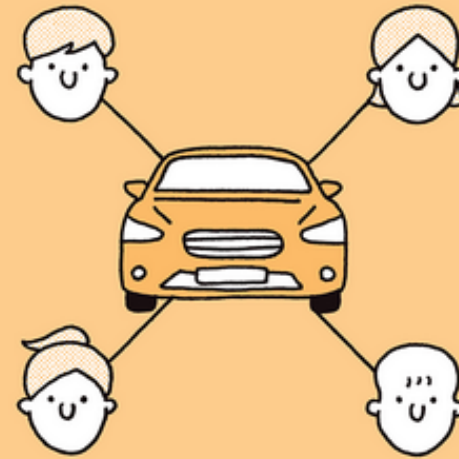

36

The buyer pays any desired amount for a given commodity, sometimes even zero. In some cases, a minimum floor price may be set, and/or a suggested price may be indicated as guidance for the buyer. The customer is allowed to influence the price, while the seller benefits from higher numbers of attracted customers, since individuals' willingness to pay is met. Based on the existence of social norms and morals, this is only rarely exploited, which makes it suitable to attract new customers.

Examples:

Humble Bundle

Panera Bread Bakery

Peer-to-peer

37

This model is based on a cooperation that specializes in mediating between individuals belonging to an homogeneous group. It is often abbreviated as P2P. The company offers a meeting point, i.e., an online database and communication service that connects these individuals (these could include offering personal objects for rent, providing certain products or services, or the sharing of information and experiences).

Examples:

Dropbox

Craigslist

Lego Factory

Twitter

Napster

Performance-based Contracting

38

A product's price is not based upon the physical value, but on the performance or valuable outcome it delivers in the form of a service. Performance based contractors are often strongly integrated into the value creation process of their customers. Special expertise and economies of scale result in lower production and maintenance costs of a product, which can be forwarded to the customer. Extreme variants of this model are represented by different operation schemes in which the product remains the property of the company and is operated by it.

Examples:

Rolls-Royce

General Electric

BASF

Amazon Web Services

Xerox

Razor And Blade

39

The basic product is cheap or given away for free. The consumables that are needed to use or operate it, on the other hand, are expensive and sold at high margins. The initial product's price lowers customers' barriers to purchase, while the subsequent recurring sales cross-finance it. Usually, these products are technologically bound to each other to further enhance this effect.

Examples:

Standard Oil Company

Nestlé Nespresso

Hewlett-Packard

Sega

Gillette

Rent Instead Of Buy

40

The customer does not buy a product, but instead rents it. This lowers the capital typically needed to gain access to the product. The company itself benefits from higher profits on each product, as it is paid for the duration of the rental period. Both parties benefit from higher efficiency in product utilization as time of non-usage, which unnecessarily binds capital, is reduced on each product.

Examples:

Spotify

General Electric

Car2Go

Xerox

Mobility Carsharing

Revenue Sharing

41

Revenue sharing refers to firms' practice of sharing revenues with their stakeholders, such as complementors or even rivals. Thus, in this business model, advantageous properties are merged to create symbiotic effects in which additional profits are shared with partners participating in the extended value creation. One party is able to obtain a share of revenue from another that benefits from increased value for its customer base.

Examples:

Amazon Kindle

Google

Apple iPhone/AppStore

Groupon

Apple iPod/iTunes

Reverse Engineering

42

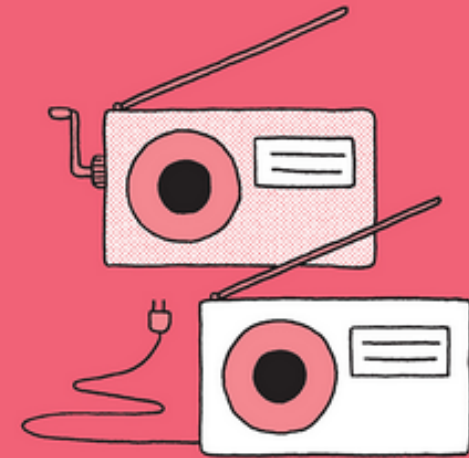

This pattern refers to obtaining a competitor's product, taking it apart, and using this information to produce a similar or compatible product. Because no huge investment in research or development is necessary, these products can be offered at a lower price than the original product.

Examples:

Bayer

Denner

Brilliance China Auto

Reverse Innovation

43

Simple and inexpensive products, that were developed within and for emerging markets, are also sold in industrial countries. The term 'reverse' refers to the process by which new products are typically developed in industrial countries and then adapted to fit emerging market needs.

Examples:

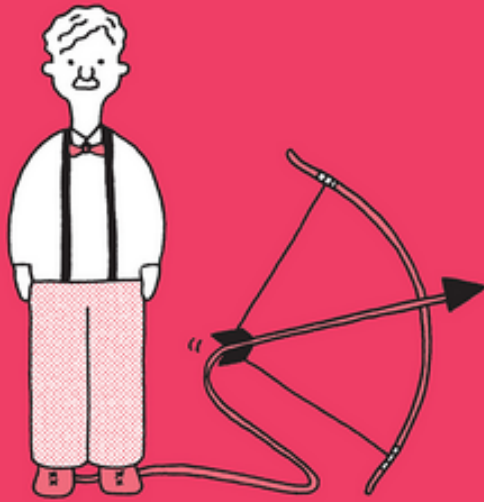

Hindustan Unilever

Renault

General Electric

Red Bull

Procter & Gamble

Robin Hood

44

The same product or service is provided to 'the rich' at a much higher price than to 'the poor'. Thus, the main bulk of profits are generated from the wealthy customer base. Serving 'the poor' is not profitable per se, but creates economies of scale, which other providers cannot achieve. Additionally, it has a positive effect on the company's image.

Examples:

Aravind Eye Care System

Warby Parker

Self-service

45

A part of the value creation is transferred to the customer in exchange for a lower price of the service or product. This is particularly suited for process steps that add relatively little perceived value for the customer, but incur high costs. Customers benefit from efficiency and time savings, while putting in their own effort. This can also increase efficiency, since in some cases, the customer can execute a valueadding step more quickly and in a more target-oriented manner than the company.

Examples:

McDonald's

Subway

Flyeralarm

Ryanair

Mobility Carsharing

Shop-in-shop

46

Instead of opening new branches, a partner is chosen whose branches can profit from integrating the company's offerings in a way that imitates a small shop within another shop (a win-win situation). The hosting store can benefit from more attracted customers and is able to gain constant revenue from the hosted shop in the form of rent. The hosted company gains access to cheaper resources such as space, location, or workforce.

Examples:

Tchibo

Levi's

Deutsche Post

Bosch

Nestlé Nespresso

Solution Provider

47

A full service provider offers total coverage of products and services in a particular domain, consolidated via a single point of contact. Special know-how is given to the customer in order to increase his or her efficiency and performance. By becoming a full service provider, a company can prevent revenue losses by extending their service and adding it to the product. Additionally, close contact with the customer allows great insight into customer habits and needs which can be used to improve the products and services.

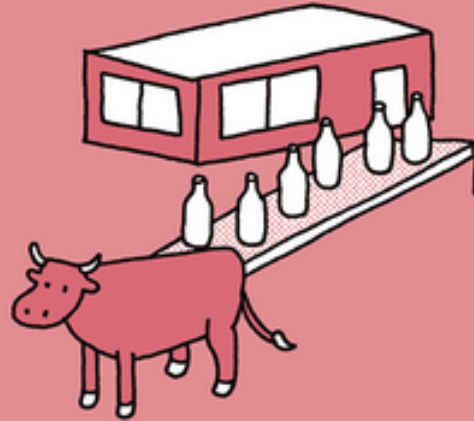

Examples: Amazon Web Services

Flyeralarm

Abbot Downing

PayPal

Tetra Pak

Subscription

48

The customer pays a regular fee, typically on a monthly or an annual basis, in order to gain access to a product or service. While customers mostly benefit from lower usage costs and general service availability, the company generates a more steady income stream.

Examples:

Porsche

Netflix

SAP

Salesforce

McFit

Supermarket

49

A company sells a large variety of readily available products and accessories under one roof. Generally, the assortment of products is large but the prices are kept low. More customers are attracted due to the great range on offer, while economies of scope yield advantages for the company.

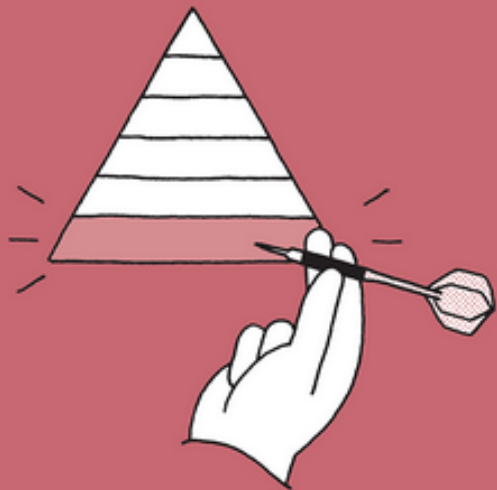

Examples:

H&M

IKEA

Amazon Store

Best Buy

Target The Poor

50

The product or service offering does not target the premium customer, but rather, the customer positioned at the base of the pyramid. Customers with lower purchasing power benefit from affordable products. The company generates small profits with each product sold, but benefits from the higher sales numbers that usually come with the scale of the customer base.

Examples:

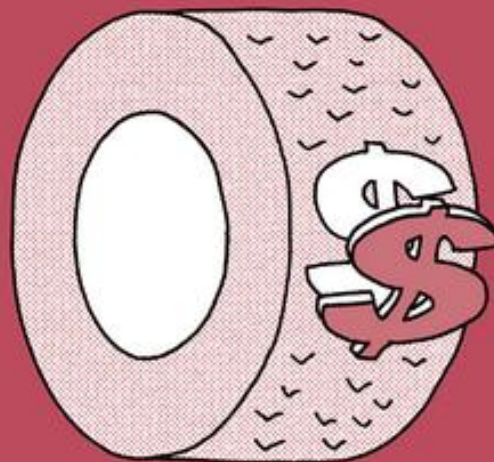

McDonald's

Renault

IKEA

Procter & Gamble

HomeBuy

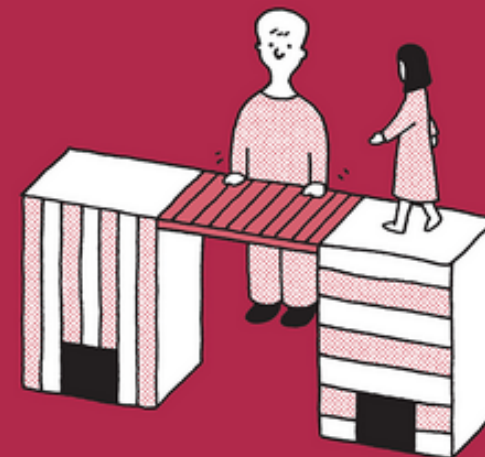

Trash-to-cash

51

Used products are collected and either sold in other parts of the world or transformed into new products. The profit scheme is essentially based on low-to-no purchase prices. Resource costs for the company are practically eliminated, whilst the supplier's waste disposal is either provided, or associated costs are reduced. This also addresses customers' potential environmental awareness ideals.

Examples:

Freitag lab.ag

Two-sided Market

52

A two-sided market facilitates interactions between multiple interdependent groups of customers. The value of the platform increases as more groups or as more individual members of each group are using it. The two sides usually come from disparate groups, e.g., businesses and private interest groups.

Examples:

Amazon Web Services

Humble Bundle

Payback

Spotify

Facebook

Ultimate Luxury

53

This pattern describes the strategy of a company to focus on the upper side of society's pyramid. This allows a company to distinguish its products or services greatly from others. High standards of quality or exclusive privileges are the main focus to attract these kinds of customers. The necessary investments for these differentiations are met by the relatively high prices that can be achieved which usually allow for very high margins.

Examples:

Lufthansa

American Airlines

Abbot Downing

Marriott International

Porsche

User Designed

54

Within user manufacturing, a customer is both the manufacturer and the consumer. As an example, an online platform provides the customer with the necessary support in order to design and merchandise the product, e.g., product design software, manufacturing services, or an online shop to sell the product. Thus, the company only supports the customers in their undertakings and benefits from their creativity. The customer benefits from the potential to realize entrepreneurial ideas without having to provide the required infrastructure. Revenue is then generated as part of the actual sales.

Examples:

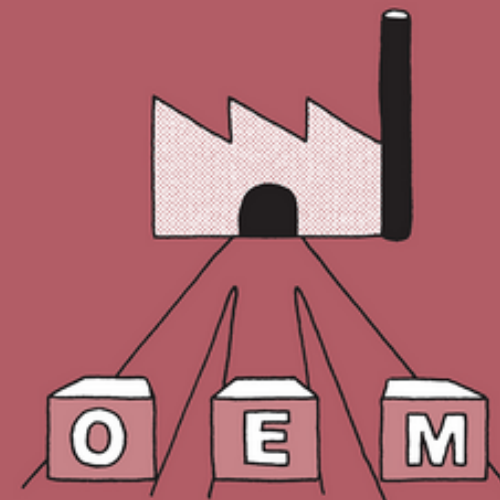

Amazon Kindle

Nike

Lego Factory

YouTube

CEWE Color

Whitelabel

55

A white label producer allows other companies to distribute its goods under their brands, so that it appears as if they are made by them. The same product or service is often sold by multiple marketers and under different brands. This way, various customer segments can be satisfied with the same product.

Examples:

Foxconn

Amazon Web Services

Richelieu Foods

Google

CEWE Color

Vision / Elevator Pitch

A quick one-liner summary that combines your vision/ product and the mission of your company

Keep it short and memorable

Try: making it relatable... as in “We are X for Y”
 (“We are AirBNB for Event Spaces”)
 (“We are the Starbucks of Frozen Yogurt”)

Financials

Include 3-5 years of financial projections

Mention key & critical assumptions in your model of expenses, customer conversion, market penetration %

Highlight each of these Yearly for at least 3 years:

- Total Customers
- Total Revenue
- Total Expense
- EBITDA

Traction

Show your timeline and milestones to date

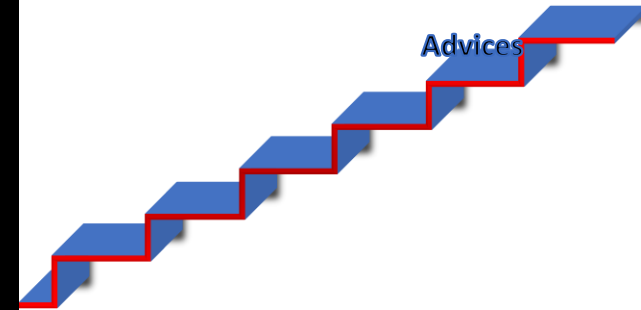

Growth metrics are key at early stage

Highlight press, partnerships, accolades

Customer success stories and/or testimonials

Industrijsko inženjerstvo i menadžment

CROWDFUNDING

The practice of funding a project or venture by raising many small amounts of money from a large number of people, typically via internet.

- Oxford Dictionaries

Crowdfunding doesn't compensate, but
supplements traditional financing.

01

02

03

04

The funding is out there

Executing a crowdfunding campaign will put your team and business through the fire and back.

1 CHOOSE THE CROWDFUNDING MODEL

2 PICK THE PLATFORM THAT WORKS FOR YOU

3 CALCULATE YOUR TARGET AMOUNT

4 FIGURE OUT YOUR COMPENSATION PACKAGE

5 SHARE THE STORY BEHIND THE BUSINESS

6 LEARN FROM OTHERS: LOOK FOR A MODEL THAT WORKED

7 FUNDRAISING IS A STATE OF MIND: GET IN THE RIGHT MINDSET

8 REMEMBER THAT TIMING COUNTS

9 COMMUNICATE WITH BACKERS EARLY ON

10 TAKE AN INDIVIDUAL APPROACH

1. SELECT CROWDFUNDING MODEL

The right crowdfunding model should reflect your motivation and help you determine what type of return the crowd will receive.

There are 4 types of crowdfunding models:

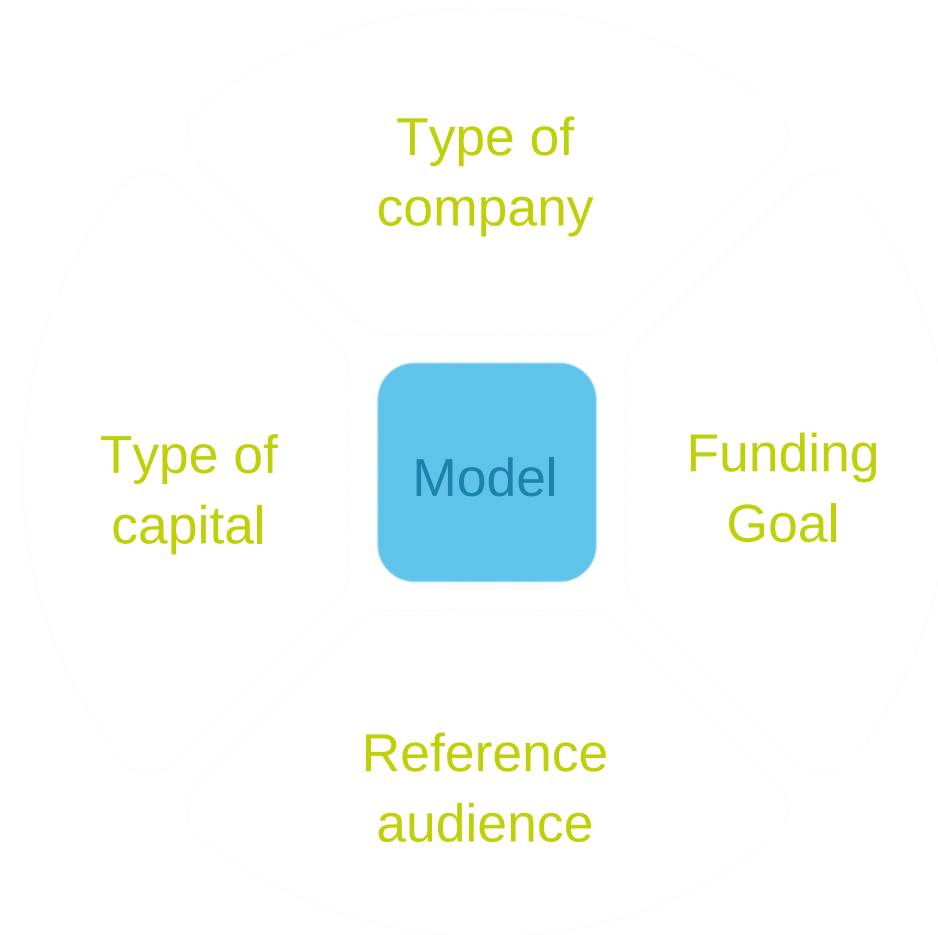

REWARD-BASED
CROWDFUNDING

EQUITY-BASED
CROWDFUNDING

LENDING-BASED
CROWDFUNDING

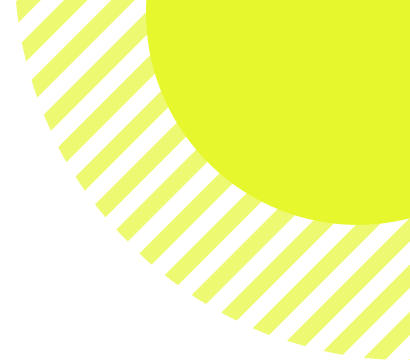

DONATION-BASED
CROWDFUNDING

Choose the right Crowdfunding model

Crowdfunding Models

REWARD-BASED CROWDFUNDING

- Backers contribute small amount of money in exchange for a reward
- Kickstarter and Indiegogo platform

EQUITY-BASED CROWDFUNDING

- Investors give large amount of money
- No reward, but an equity in the company itself
- Most used to raise funds for company's growth
- AngelList and Crowdfunder platform

LENDING-BASED CROWDFUNDING

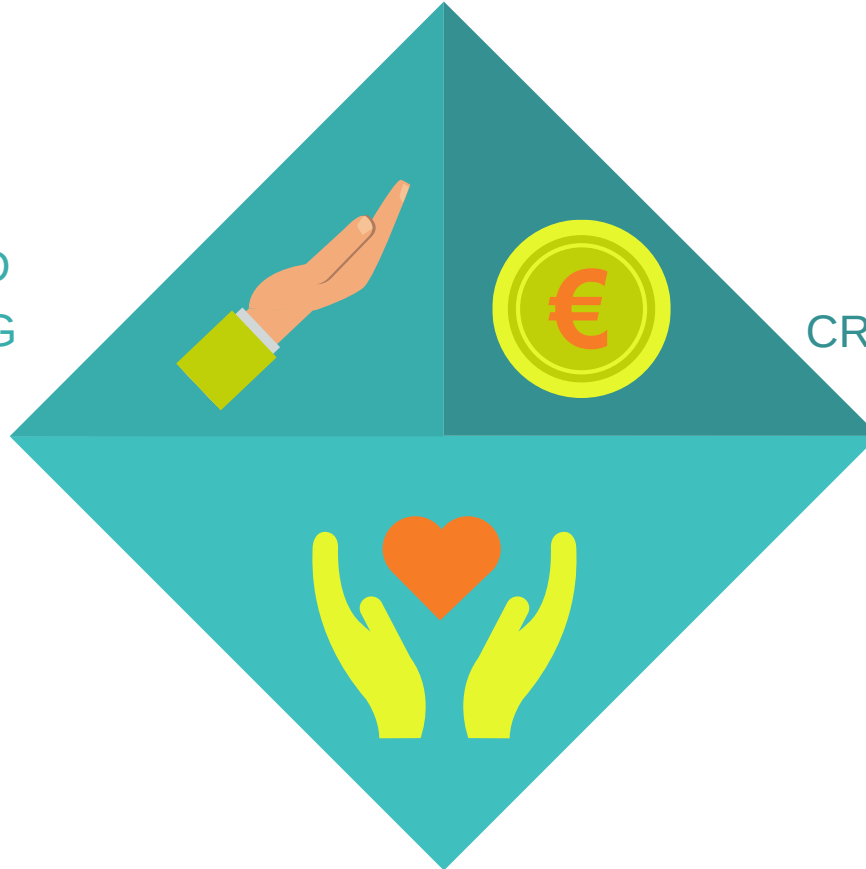

- No investors or donors, just lenders
- No reward or equity, profit of interest
- Raised often for house/car improvements

DONATION-BASED CROWDFUNDING

- Donors generally give small amount of money
- No reward
- For non-profit or cause
- GoFundMe and Crowdrise platform

Crowd's Motives for Investing

TO RECEIVE
REWARD-BASED
CROWDFUNDING

TO EARN
EQUITY
CROWDFUNDING

TO SUPPORT
DONATION-BASED CROWDFUNDING

2. PICK THE PLATFORM

Due to its large scope, crowdfunding predominantly takes place on the internet. After choosing the best model, the next step is to choose the right platform.

I BY TYPE

II BY PLACE

3. SET TARGET AMOUNT

Most crowdfunding platforms operate on the "all-or-nothing" basis. Initiators specify a target sum and if this is reached, they receive the money to finance their projects. If the target amount is not reached, the initiators get nothing and the crowd gets their money back.

REALISTIC

The target sum should be as realistic as possible to ensure it can be met.

COVER COSTS

This amount should cover all costs of realizing the project.

PROJECT-BASED

It is wise to disclose the gross cost of the project in order to provide transparency and trust.

Funding Threshold and Funding Limit

FUNDING
THRESHOLD
100.000€

CURRENT
AMOUNT
380.000€

FUNDING
LIMIT
500.000€

4. CHOOSE COMPENSATION

Selecting a crowd's compensation is an important criterion, especially for reward crowdfunding.

COPY OF THE PROJECT

Pre-selling is often offered as compensation. This is a type of advance in which the supporters get a copy of the project.

REWARD RELATED TO THE PROJECT

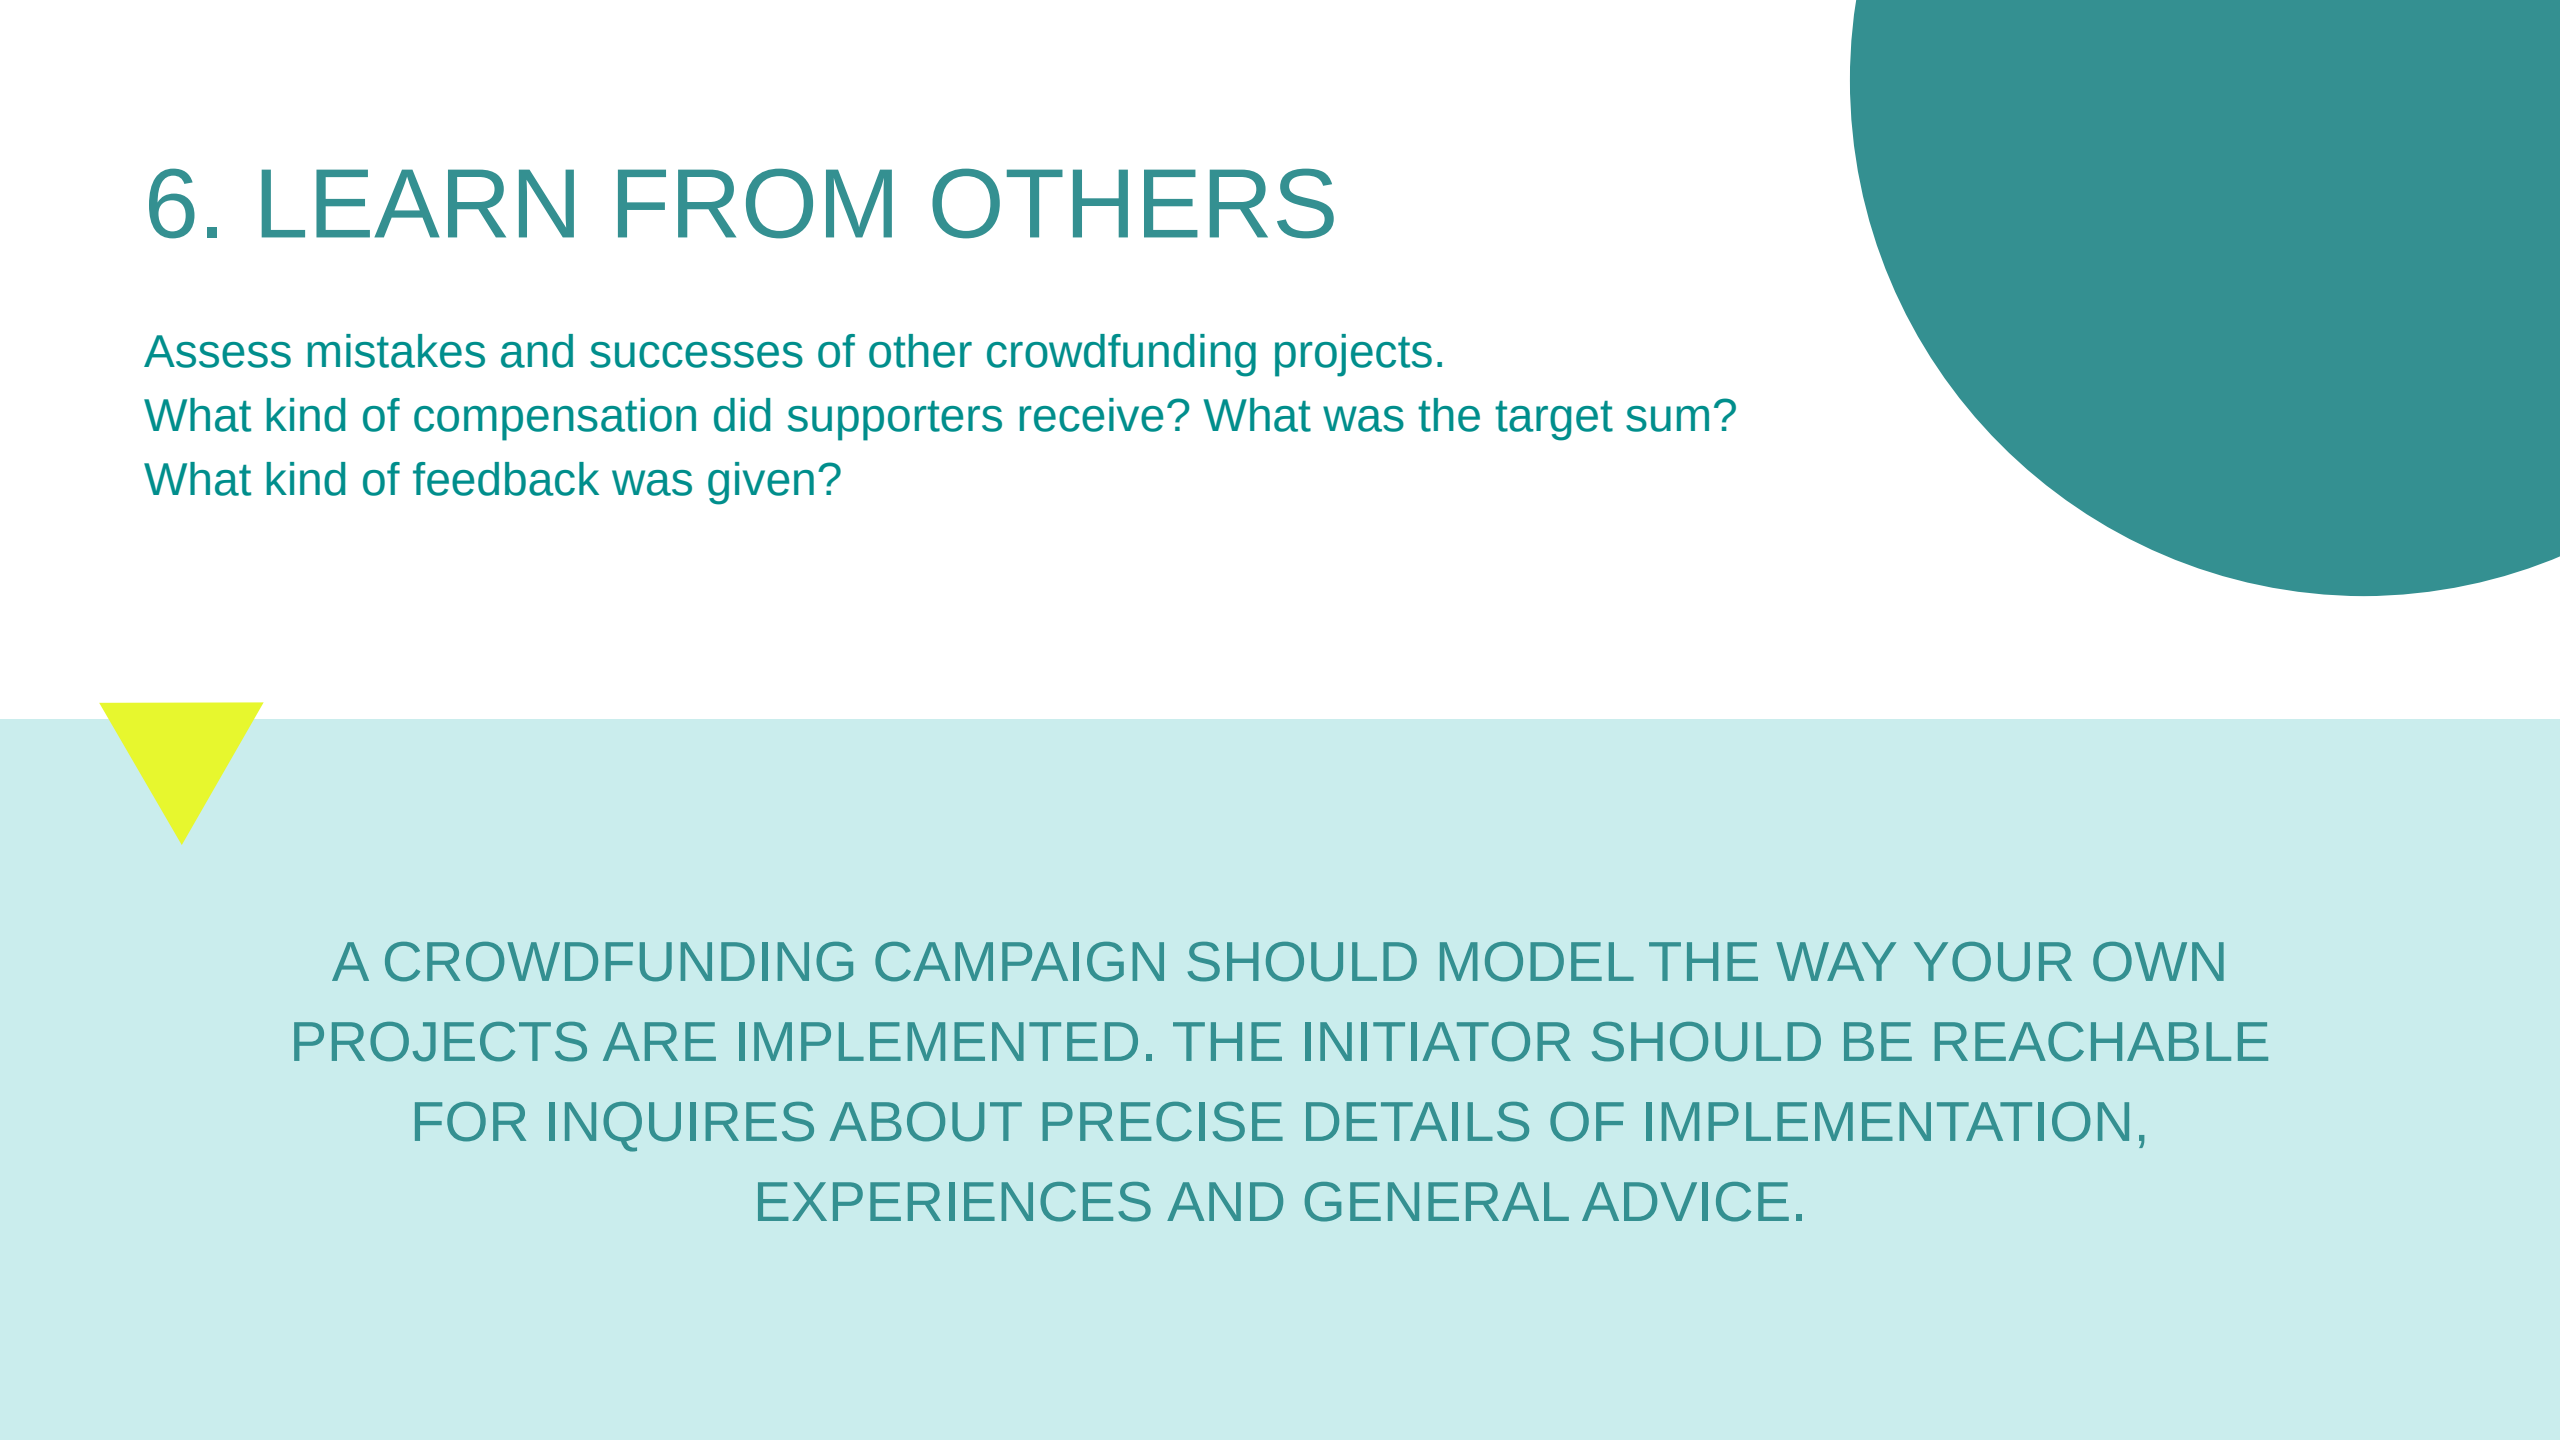

This is a creative way to offer compensation (input of the project, something of sentimental value, etc.) that is closely related to the project.

6. LEARN FROM OTHERS

Assess mistakes and successes of other crowdfunding projects.

What kind of compensation did supporters receive? What was the target sum?

What kind of feedback was given?

A CROWDFUNDING CAMPAIGN SHOULD MODEL THE WAY YOUR OWN PROJECTS ARE IMPLEMENTED. THE INITIATOR SHOULD BE REACHABLE FOR INQUIRES ABOUT PRECISE DETAILS OF IMPLEMENTATION, EXPERIENCES AND GENERAL ADVICE.

Project	Crowd	Communication	Person
Clear Project Description	Family & Friends	Communication Plan	Time & Engagement
Project Team	Regionality	Emotion & Passion	Personal Involvement
Story & Innovation	Selection of Platform	Social Media	Open Mindset
Graphics & Video	Funding Goal & Rewards	Online & Offline PR	Cooperation Partner
Updates & Progress	Transparency	Personal Form	Professionalism

8. MAKE THE START OF THE CAMPAIGN COUNT

A strong start to funding indicates early interest in the project. This then motivates potential supporters to follow suit. This is known as "herd behaviour".

How can you start?

REACH OUT TO YOUR
PERSONAL NETWORK
FOR CO-FINANCING.

OFFER A LIMITED
NUMBER OF BENEFITS
OR OFFER DISCOUNTS
TO EARLY SUPPORTERS.

9. GAIN CROWD SUPPORTERS

The crowd is the most important factor in crowdfunding. It provides both financial support and feedback, as well as ensures that the idea circulates. If the crowd is dissatisfied, it can adversely affect the success of the project. Therefore, it is important to have a constant, open dialogue between the initiator and the crowd.

WHO WILL BE INTERESTED IN THE PROJECT? IDENTIFY THE TARGET GROUP AND DETERMINE HOW TO REACH AND ADDRESS IT.

The Relationship between the Initiator and Crowd

FINANCIAL
SUPPORT

CONSTANT
DIALOGUE

FEEDBACK

HONESTY

MARKETING

TRANSPARENCY

10. ESTABLISH INDIVIDUAL APPROACH

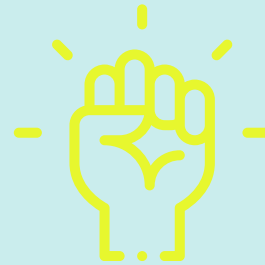

Receiving advice and learning from other's mistakes can be helpful but ultimately, there is no perfect recipe for successful crowdfunding. Embrace your own creativity and uniqueness.

PURPOSE

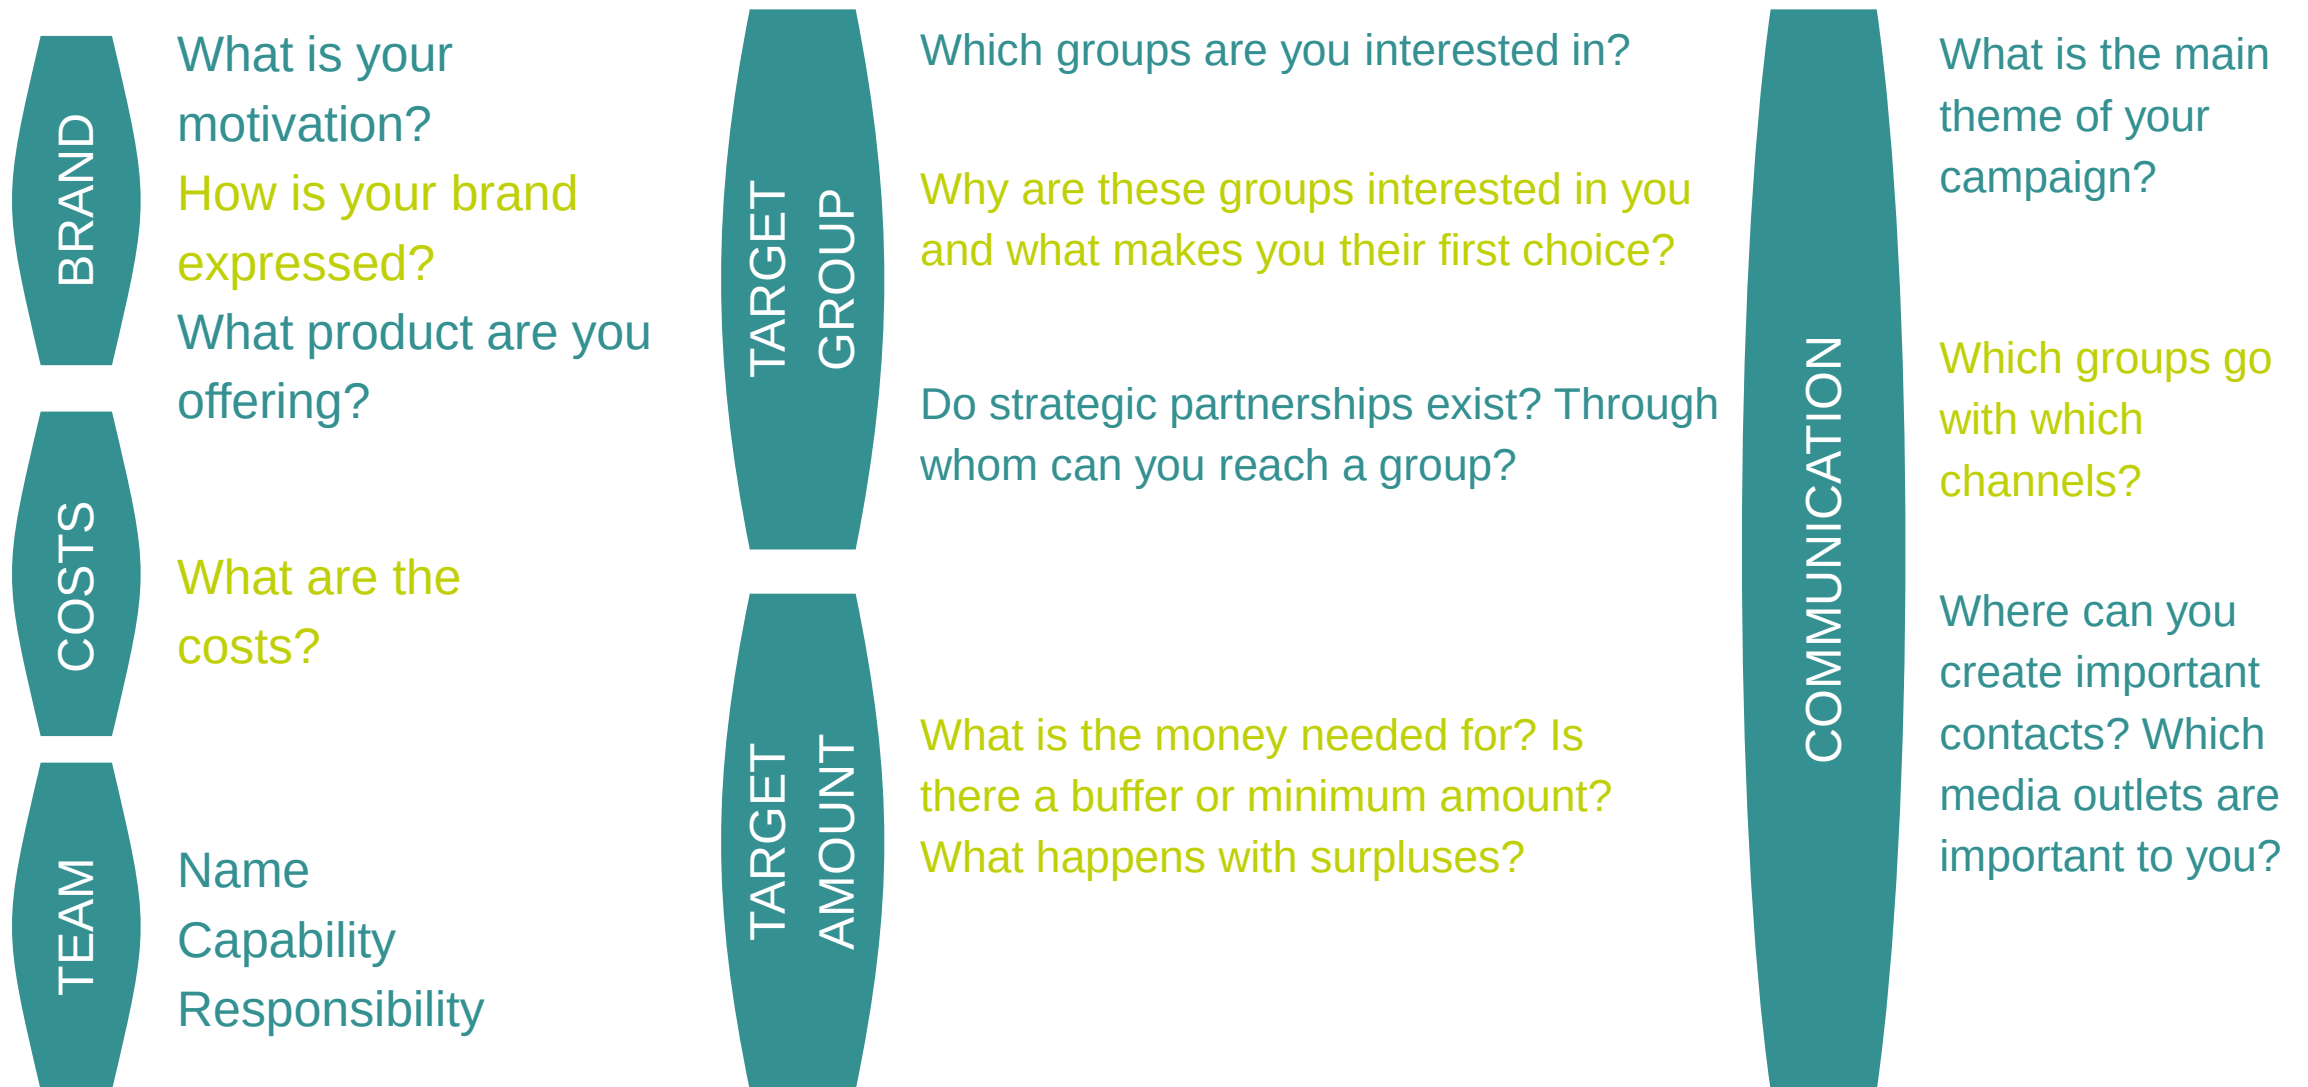

MOTIVATION

INGENUITY

CROWDFUNDING PLAN

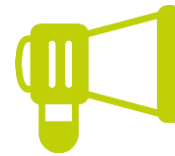

01 SETUP

- 4 to 8 weeks
- Define CF-model (e.g. Equity)
- Analyse, e.g. the business plan
- Design Campaign
- Create pitch video

02 CAMPAIGN

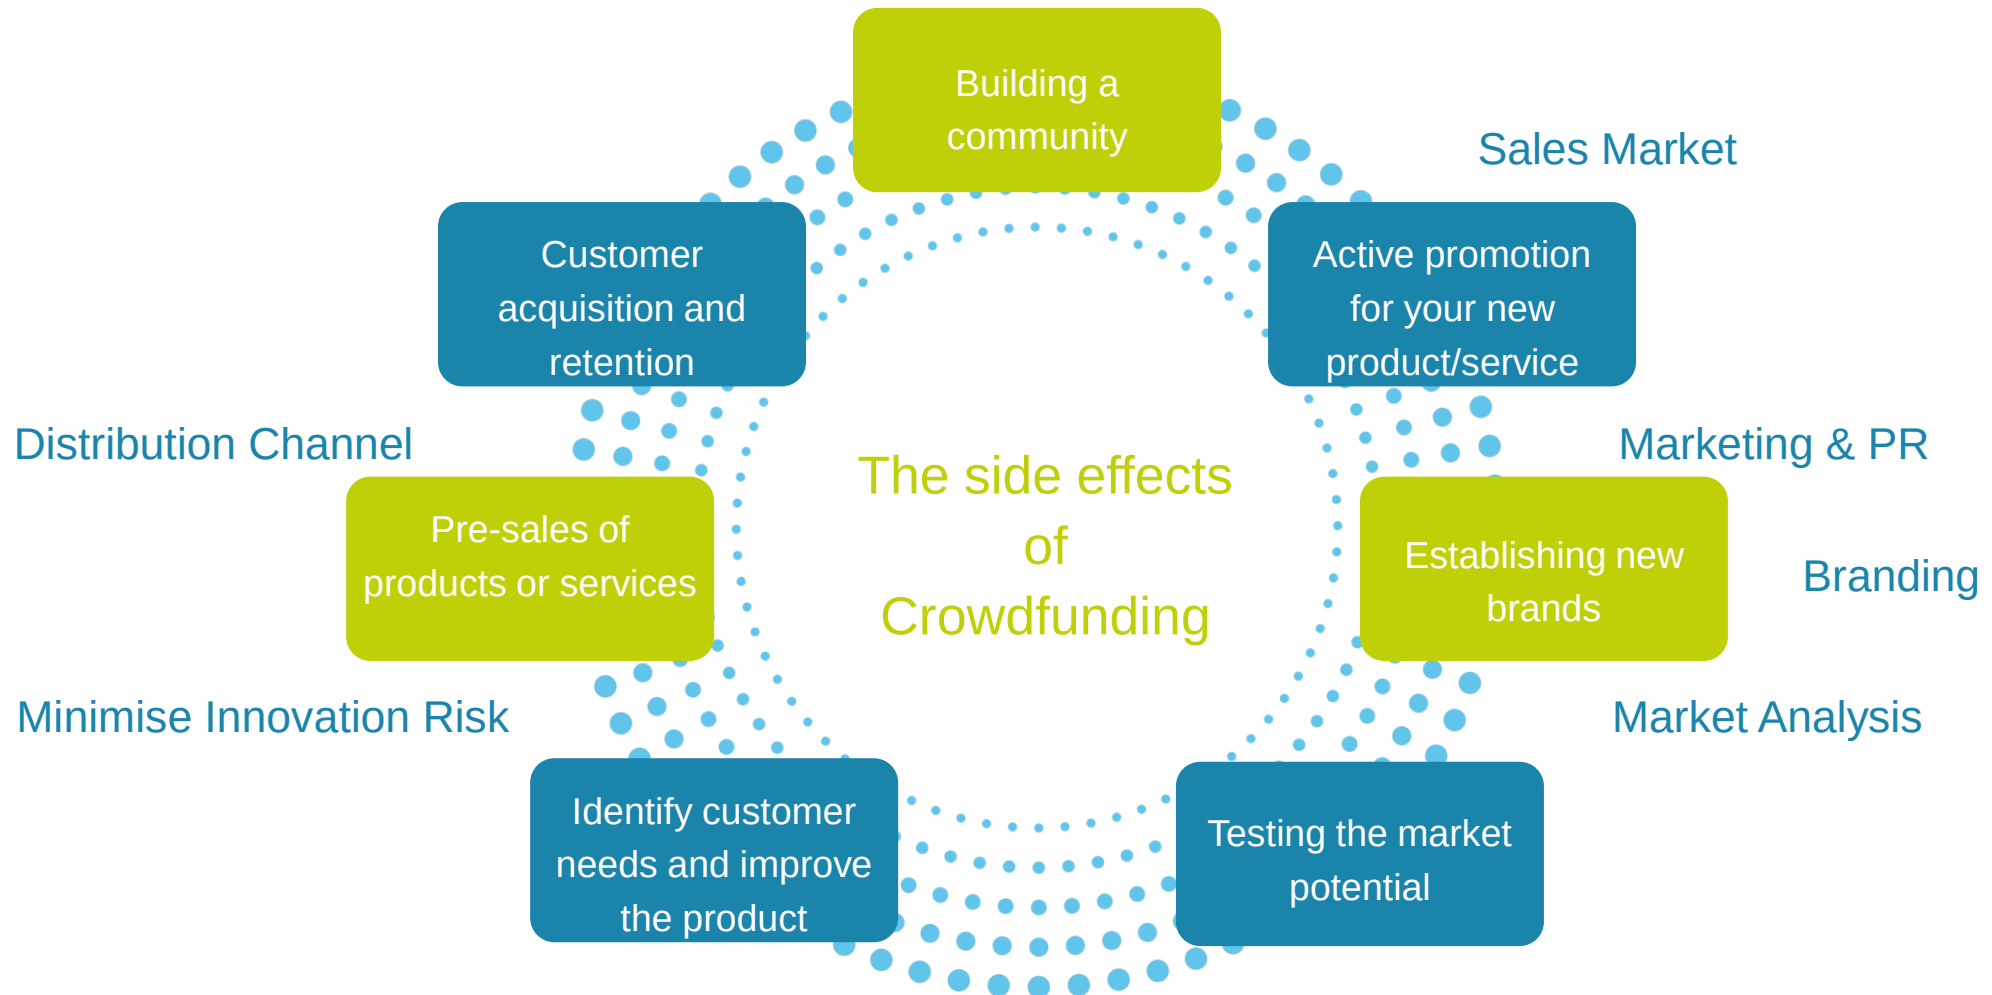

- 1 to 3 months
- Lead-investor phase
- „Going Live“ on platform
- Ongoing on- and offline marketing activities
- Ongoing supervision and communication

03 REPORTING

- After campaign reporting during runtime of the project
- Regular reporting
- Publishing Information
- Communication and information for the crowd

The side effects of Crowdfunding

A success story.

The EU-funded **KATANA** project has enabled new European **tech-based agrifood products and services** to be launched and has helped to ensure their ongoing success. Acting as business accelerator, KATANA, provided selected SMEs and start-ups with grants, training, support, and opportunities to develop their ideas and create new products or services.

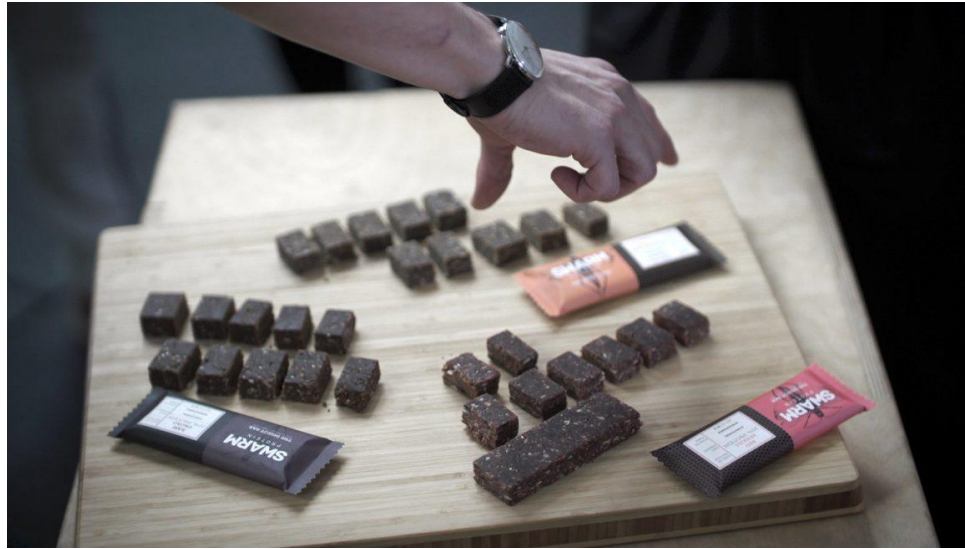

For the first time, KATANA used crowdfunding to enable the market to select the agribusinesses with the most potential. As a result, companies raised almost **EUR 1 million** of funds and **10 businesses** were successfully launched.

A success story.

...for startups

Fondovi rizičnog kapitala / VC funds

Inovativni modeli finansiranja
Finansiranje inovativnih preduzeća

FAKULTET TEHNIČKIH NAUKA
UNIVERZITET U NOVOM SADU

Departman za
Industrijsko inženjerstvo i menadžment

Tradicionalni pristup

Banke nisu investitori. Banke ne trpe nikakav rizik.
Njihov poslovni model je zasnovan na nultom riziku. Svuda u svetu.

Posao banaka je da vam pozajme siguran i osiguran novac.
Morate da imate imovinu koja, kad se proda, može u potpunosti
da podmiri pozajmicu.

Banke ne finansiraju razvoj.

Start-up

Sami preduzetnici, njihovi prijatelji i porodica, biznis anđeli, strateški partneri – finansiraju početak.

Fondovi rizičnog kapitala – Venture Capital fondovi

- Rizik je polazna tačka njihovog poslovnog modela – nisu banke
- Naravno, što manje rizika, to bolje
- Investiraju u kapital – equity – zarađuju na rastu kapitala, ne profitu
- Ako kompanija ne uspe – izgubili su sav novac

Čiji je novac?

- Menadžeri se ne igraju svojim kapitalom
- Penzioni fondovi, velike banke, velika preduzeća
veoma bogati pojedinci i familije

Faze razvoja

Seed

Rana faza – rani Venture Capital

Faza rasta – Venture Capital

Public markets – stock exchange

Private Equity – mezaninne finansiranje

Rani VC fond

Fond

- 20 000 000 €
- Dovoljno za 15–20 investicija
- 10–14 će izaći +–0
- 2,5–4 će propasti
- 1,5–2 će uspeti
- Tipično fondovi investiraju zajedno u kompaniju

Menadžment fonda

- 3–4 menadžera
- Management fee – 2% fonda u proseku

VC interes

VC fond zarađuje na rastu vrednosti kapitala, ne na profitu.

Do rasta kapitala dolazi usled rasta prihoda,
koji pravi osnov za veliki profit.

Do izlaska na tržište kapitala najvažniji je rast prihoda,
a nakon njega rast profita.

Traže se projekti sa velikim tržištem
koji će doneti ROI od više od 10 puta.

Seed

Pre proizvoda

- Razvoj koncepta
- Nema prihoda
- Potvrda tržišta – razgovori sa korisnicima

Finansijski anđeli:

- Broj zaposlenih: 2–8
- Trajanje sredstava: 6–12 meseci
- Traženi kapital u proseku: 100 000 €
- Deo kompanije prodat investitorima: 10%–30%

Rana faza

Faza razvoja proizvoda

- Razvoj proizvoda
- Prvi prihodi
- Potvrda tržišta
- Pravljenje tima

Rani Venture Capital fondovi

- Broj zaposlenih: 15–25
- Trajanje sredstava: 12–24 meseca
- Traženi kapital u proseku: 1 000 000 €
- Deo kompanije prodat investitorima: 40%–60%

Faza ekspanzije

Ekspanzija – razvoj i rast biznisa

- Nastavljen razvoj proizvoda i tržišta
- Rast prodaje i marketinga
- Put ka profitabilnosti
- Konstantna potvrda tržišta
- Stvaranje jake organizacije

Venture Capital fondovi

- Broj zaposlenih: 50–150
- Trajanje sredstava: 2–4 godine
- Traženi kapital u proseku: 5 000 000 €
- Deo kompanije prodat investitorima: 30%–50%

IPO

Faza profitabilnosti

- Nastavljen razvoj proizvoda i tržišta
- Brz prodor na tržište – velika ulaganja u marketing
- Postignuta profitabilnost i njen konstantan rast
- Predvidivost prihoda i njihovog rasta – postavljanje i postizanje ciljeva
- Jačanje organizacije

IPO – izlazak na berzu

- Broj zaposlenih: 150+
- Traženi kapital u proseku: 20 000 000 €
- Deo kompanije prodat investitorima: 15%–25%

Korist

Venture Capital menadžment tim donosi:

- Pristup dodatnom kapitalu
- Duboke džepove za situacije kad
- Iskustvo u radu sa velikim brojem različitih kompanija
- Upravljanje korporacijom

Kontakti u industriji

- Kontakti za prodaju i marketing
- Veze među kompanijama u koje investiraju
- Kontakti sa medijima i biznis analitičarima
- Kontakti sa drugim investitorima

Gde su?

U SAD ima preko 3.000 kvalitetnih fondova

- Godišnje investiraju preko 20 milijardi dolara u nove projekte

U Evropi ima preko 1.000 kvalitetnih fondova

- Godišnje investiraju preko 5 milijardi evra u nove projekte

Svaki fond ima vebisajt sa informacijama o poslovnoj filozofiji, oblastima za koje su zainteresovani, prethodnim investicijama

Dokumenti i pristup

Tri dokumenta:

- Executive Summary – od 2 do 5 stranica – efektan marketing investicije
- PowerPoint prezentacija – od 15 do 25 stranica – glavna prodaja investicije
- Poslovni plan – detaljni dokumenti

Kratak uvodni e-mail, predstavljanje i Executive Summary kao prilog. Cilj je da od mase dokumenata koje menadžeri dobijaju i čitaju dnevno vaša ideja kristalno jasno odskoči u prva dva minuta čitanja.

Ukoliko je Executive Summary interesantan, zakazuje se sastanak.

Odluka menadžera je potpuno subjektivna. Vrlo često trivijalne stvari odlučuju o interesu za investiranje. Ako nema interesa, to ne znači da drugi menadžer neće biti zainteresovan.

Procedura investiranja

Prvi sastanak i PowerPoint prezentacija su ključni.
Ona uspostavlja definitivan interes i prodaje investiciju.

Sleduje preliminarni „due dilligence”. Provera tržišta.
Provera klijenata i partnera. Provera tehnologije. Angažovanje stručnjaka.
Ovo traje od tri do šest sedmica.

Investitor daje Term Sheet – uslovi finansiranja i ponuda.

What will you learn today?

Main objective

The aim of this session is to introduce students to break-even analysis and explain how they can use this tool for identifying at what point their SMEs, new product or service will become profitable.

How will we help you to do this?

In this session we will:

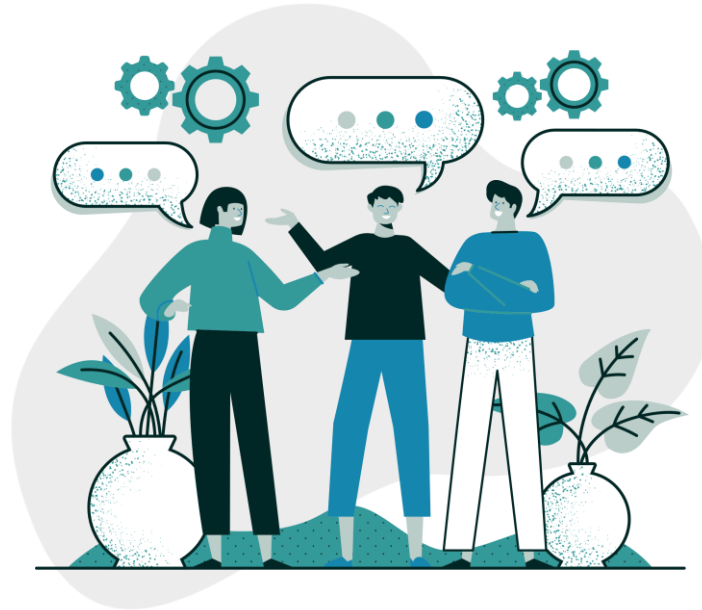

- ✓ clarify the break-even point – the level of output at which the revenues generated by a project equal its costs.
- ✓ explain how SMEs can compare variable and fixed costs with the sales revenue.
- ✓ teach you how to determine the break-even point of your SME through short interactive exercises.

Why is this important?

After this lesson, you will be able to help SMEs understand the nature of their expenses, identify fixed and variable costs, and to apply the concept of “break-even” to evaluate new opportunities.

Topics that we will cover

- The basics of Break-Even Analysis
- Types of SME costs
- Revenue and pricing
- The Break-Even Graph
- The Break-Even formula

What is the Break-Even Analysis?

The **Break-Even Analysis** is a financial tool which helps a company calculate when a new product, new service, or even the company itself will **become profitable**.

Simply put, the Break-Even Analysis specifies the **number of products or services** that a company needs to **sell or provide** in order to meet its costs.

The **Break-Even Point** is a point at which a company is **neither making nor losing money**, however, all of its costs have been covered.

Common types of SME costs

- Sales and Marketing Costs
- Insurance
- Hourly Wages and Direct Labour
- Employee Benefits
- Meals & Entertainment Expenses
- Material Costs
- Equipment Costs
- Research and Development
- Professional Services
- Credit Card and Bank Fees
- Rent, Utilities & Phone
- Travel Expenses

In general, all the costs can be divided into two main categories: fixed costs and variable costs.

Can you tell which of the costs listed above are fixed and which are variable?

Variable vs. fixed costs

Variable costs are directly related to production volume. As production goes up, so do variable costs. Equally, as production decreases, variable costs decrease as well.

Variable costs vary with the number of units produced or sold.

Fixed costs stay the same, regardless of the output.

Fixed costs are costs associated with the company's product, that have to be paid regardless of the production volume. They remain unchanged even if the production or sales increase.

How to calculate the sale price and get revenue?

Income or revenue is the amount of money which a company foresees to acquire from the sales of its products or services.

$$\begin{array}{c} \text{Variable costs + Fixed costs per} \\ \text{unit + Profit margin} \\ = \\ \text{Product price} \end{array}$$

The three most commonly used pricing strategies are:

- Cost-based pricing
- Demand-based pricing
- Competition-based pricing

Evaluating Competition

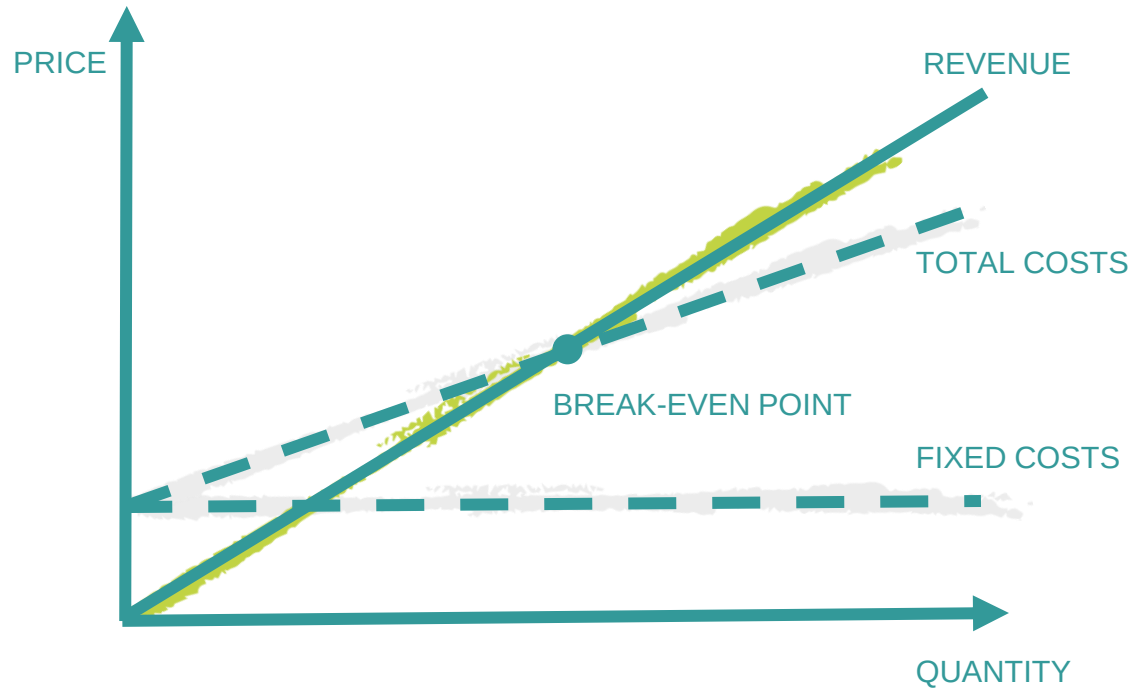

Competition-based pricing, also referred to as market-oriented pricing, involves establishing a price based on in-depth [research and analysis](#) of the target market.

With this pricing strategy, a company will base what they charge on [what competitors are charging](#).

The company sets the price [higher or lower](#) than its competitors, depending on the similarity of their own product/service and what the company aims to achieve.

The Break-Even Graph

Let's practice!

Product:

Biobased soap

Sales price:

3.00 EUR

Variable costs:

1.50 EUR

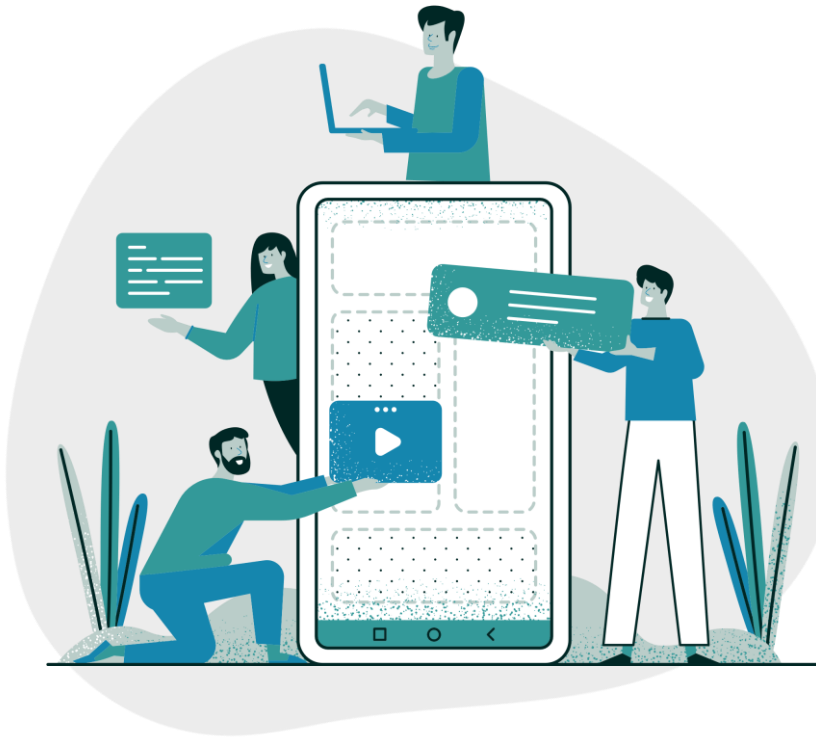

Fixed costs and the Break-Even Point:

Calculate!

How many units need to be sold to
reach the Break-Even Point and
when will this happen?

“SMEs need help to understand the IP landscape and know where they can get finance; easier paths to registration of the most appropriate and accessible rights; help with other tools such as domain names or trade secrets; and assistance to combat infringement.”

Christian Archambeau, Executive Director of the EUIPO

EUIPO Studies 2021/2022

2022 INTELLECTUAL PROPERTY SME SCOREBOARD EXECUTIVE SUMMARY

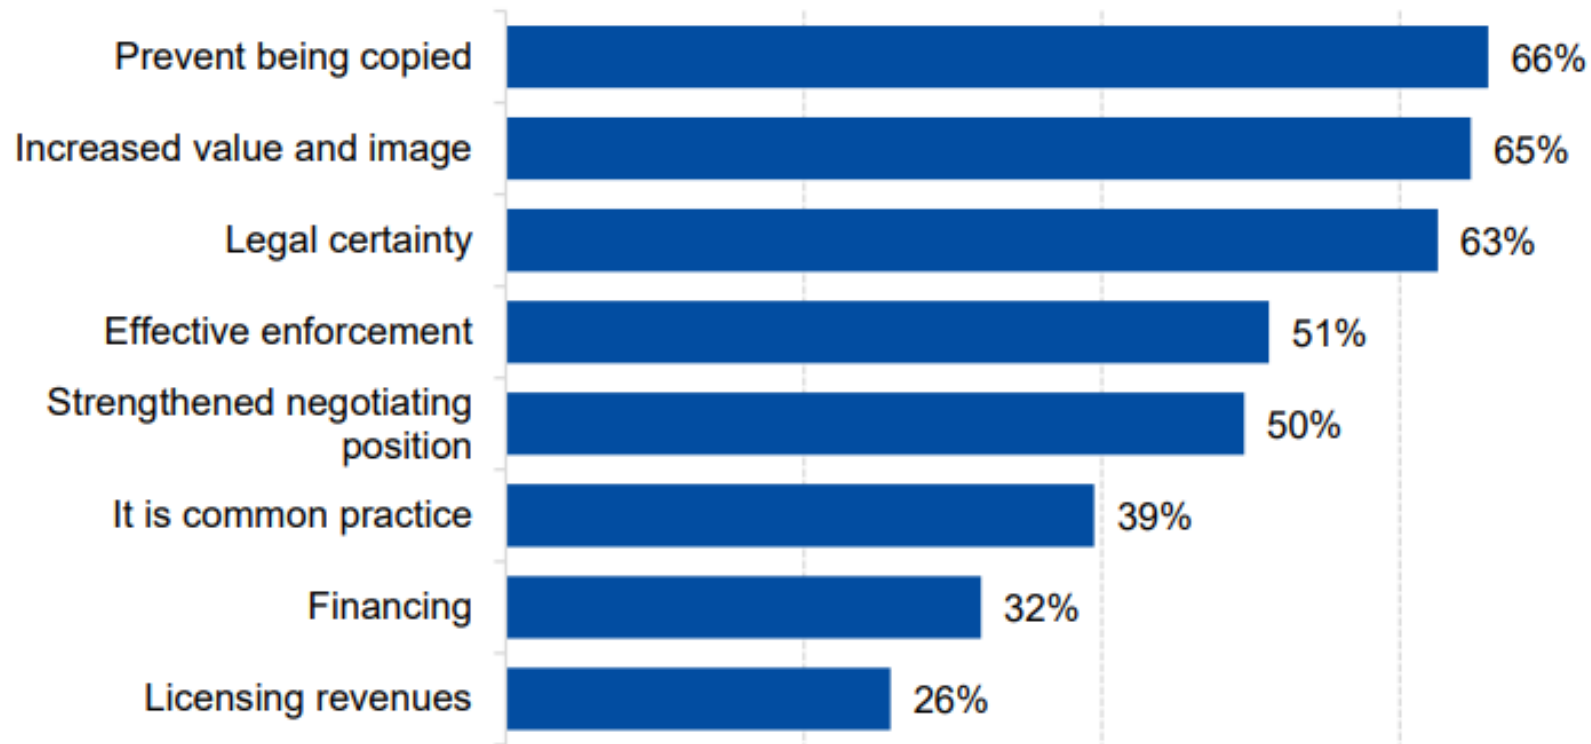

September 2022

- 10% of SMEs report that they own registered IPRs. 93% of SMEs that have registered IPRs have seen a positive impact resulting from that registration. Most commonly, SMEs with registered IPRs reported that registration:
 - improved their reputation or image (mentioned by 60%),
 - provided them with better IP protection (58%),
 - gave better long-term business prospects (48%).
- 45% of SMEs that own registered IPRs tried to achieve financial gain by using their intellectual assets, either directly, through sale or licensing, or indirectly, through for instance using their registered IPR portfolio for business development. > and almost all of them were successful!
- **Firms with more than one IP right are more likely to grow**
- IPR use can identify future high growth firms early in their development

IPR Registration

- Reasons to register IPRs (overall)

Source: 2022 Intellectual Property SME Scoreboard

How can IP affect your business?

IP may assist you in almost every aspect of your **business development** and **competitive strategy**:

- from product development to product design,
- from service delivery to marketing,
- from raising financial resources to exporting or expanding your business abroad through licensing or franchising.

Using and understanding the IP rights, you can:

- secure competitive advantages,
- generate revenue streams,
- reduce tax liability,
- serve as a source of competitive intelligence
- facilitate access to financing
- attract investors and partners, etc.

Benefits of intellectual property rights for a business

- A brand sets a business apart from its competitors, building trust and consumer loyalty. Learn more about **trademarks**.
- From reassuring investors to increasing margins, using your **patents** strategically can improve your bottom line.
- Protecting the way your product looks with an **industrial design** can provide a major competitive advantage.
- **Copyright** protects the expression of an idea, in different forms.
- When the source and authenticity matter, using **geographical indications** can identify your product as being the real deal.
- **Trade secrets** have the potential to protect a wide range of information that has commercial value due to its confidential nature.
- Plant breeding results in new, improved **plant varieties** that are an important and sustainable means of achieving food security in the context of population growth and climate change.

Protecting your innovation

Patents & Utility Models

→ Technical Inventions

Copyright

→ Artistic, literary, scientific works
→ Software or other visual works (videos)

Industrial Designs

→ Aesthetic aspect of an article

Trade marks

→ Business identity (trade names /logos/slogans...)

Trade Secret

→ Valuable business info (processes, clients lists)

Plant Variety Rights

→ Botanical varieties

Geographical Indications

→ specific geographical origin

Database Rights

→ sui generis form of IP

Database rights

- Can a database be protected by copyright?

Copyright

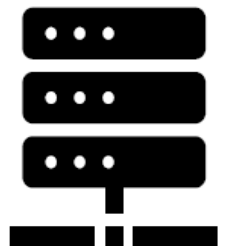

- As compilation

Database right

- Protects the contents of a database
- Sui generis

...” prohibits the extraction or re-utilisation of any database in which there has been a substantial investment in obtaining, verifying or presenting the data contents.”

- No need for originality ≠ copyright

Database Rights

Combined use

Business model / Business plan / IP strategy

In its **business model**, a company sets out a framework for identifying, creating and delivering value to its customers, its proposal for generating revenue, and a description of its current and projected competition, its target markets, etc.

Taking operational and financial elements into account, a **business plan** sets out in detail how a business will implement its business model.

Because the business plan is an essential strategic document that projects the future of a new business, a comprehensive business plan requires an entrepreneur to make detailed projections. > Most early-stage entrepreneurs will not have enough data

The **company's IP strategy** must be integrated in the business plan, which should demonstrate how IP will support successful implementation of the business model.

*...a strategy for **increasing** a company's added **value** and for **securing** profits by creating, protecting, and using IP while considering the company's management resources and external business **environment**.*

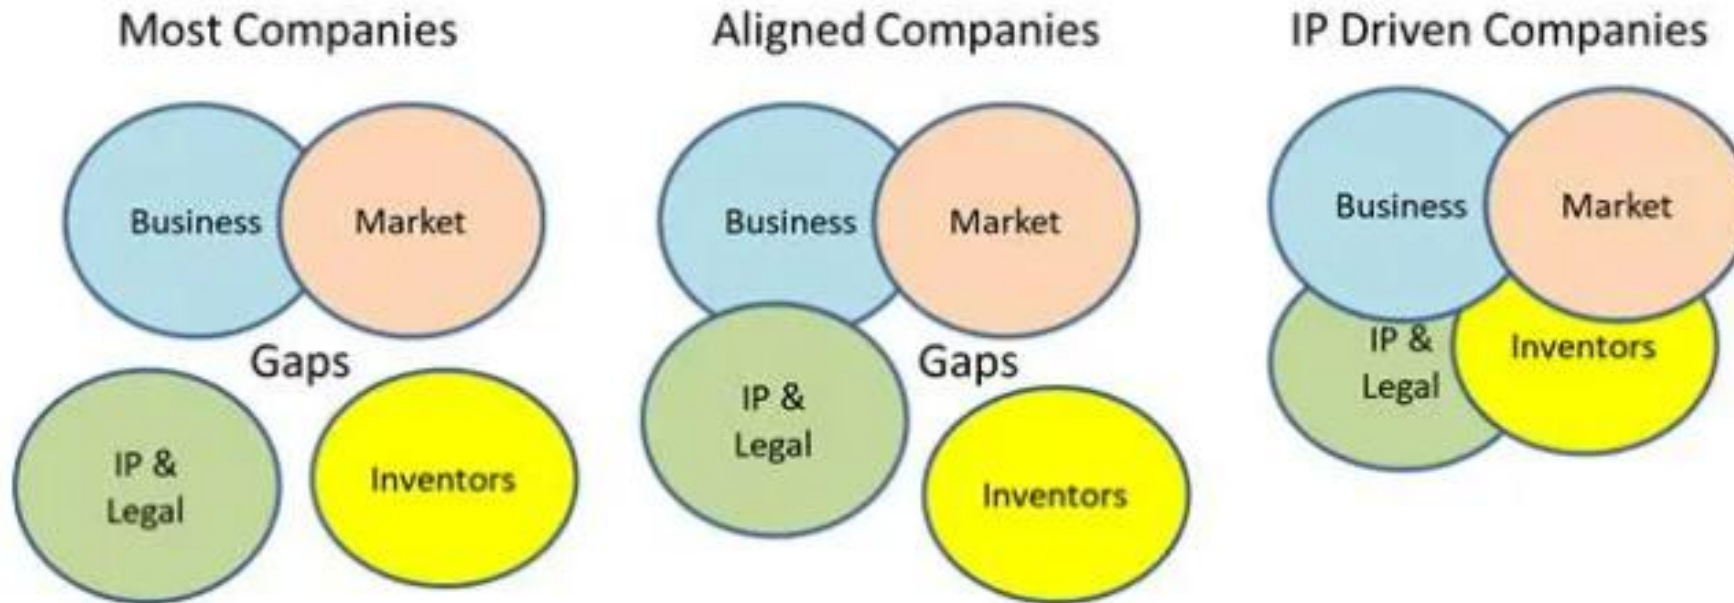

Integration of IP into Business Planning

Critical for success is to have an IP strategy that is critically linked to business planning.

This means that an **IP strategy must:**

- Have clever tactics
- Have a linkage between IP strategy and the high levels of the business (Financial, Operations, HR, and R&D)
- Have a linkage to the Vision, Mission, and Goals of the organization
- Have a linkage to, or consideration of, the market
- Have a linkage to inventors through the Invention Strategy
- Involve an understanding of competitor and value chain IP
- Involve an understanding of Human Capital (potential IP)
- Involve the use of various IP vehicles (publications, trade secrets, know-how)
- Be an ongoing process of the company, etc.

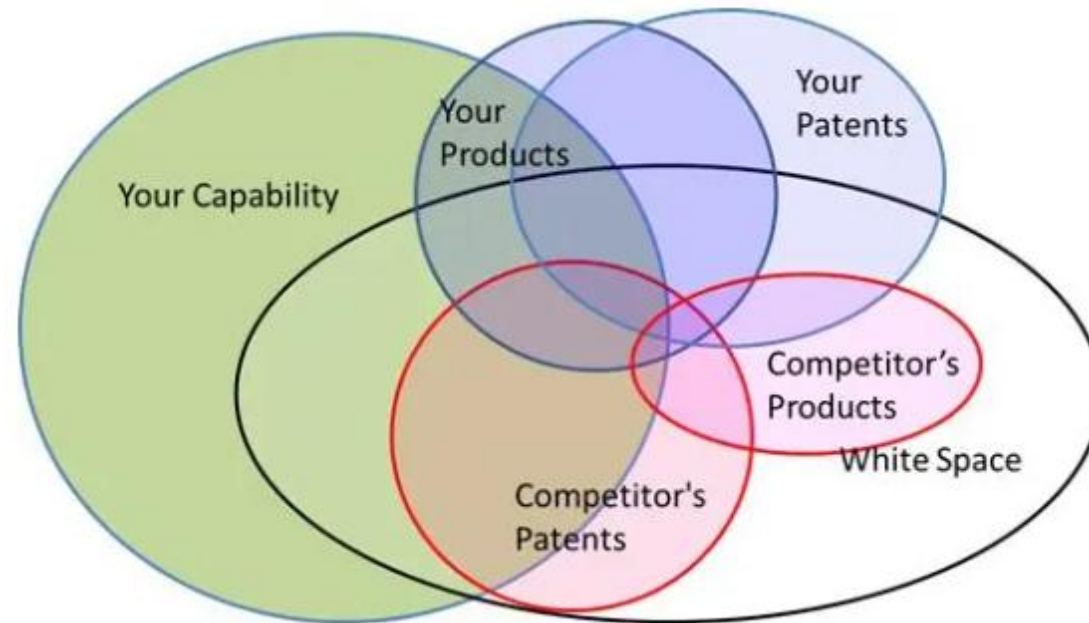

IP Strategy Should Integrate Key Business Functions

Areas of IP Strategy Focus

An **Integrated IP strategy** should clearly address:

- 1) the space “1” between the company’s products and its patents,
- 2) the gray area “2” between the company’s products and competitors patents,
- 3) the space “3” between the company’s patents and competitors’ products, and most importantly
- 4) the “white” space between the company’s capability and where the market and its competitors will be in the future.

Tools: Examples of search engines

The Benefits of IP Strategies to the company

From a timing standpoint, the benefits can be Immediate, Medium-Term, and Long-Term.

Immediate

- **savings** by identifying patents of little or no business value and abandoning them saves their maintenance costs.

Medium-Term

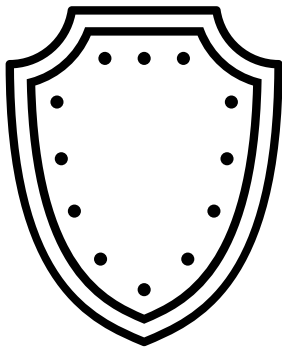

- **licensing** to everybody, including competitors, to maximize value.
 - potentially advantageous situation
- structuring **joint ventures** and **alliances**

Long-Term

- creation of **better and stronger patents**
- Improved **competitive intelligence** and strategic business vision

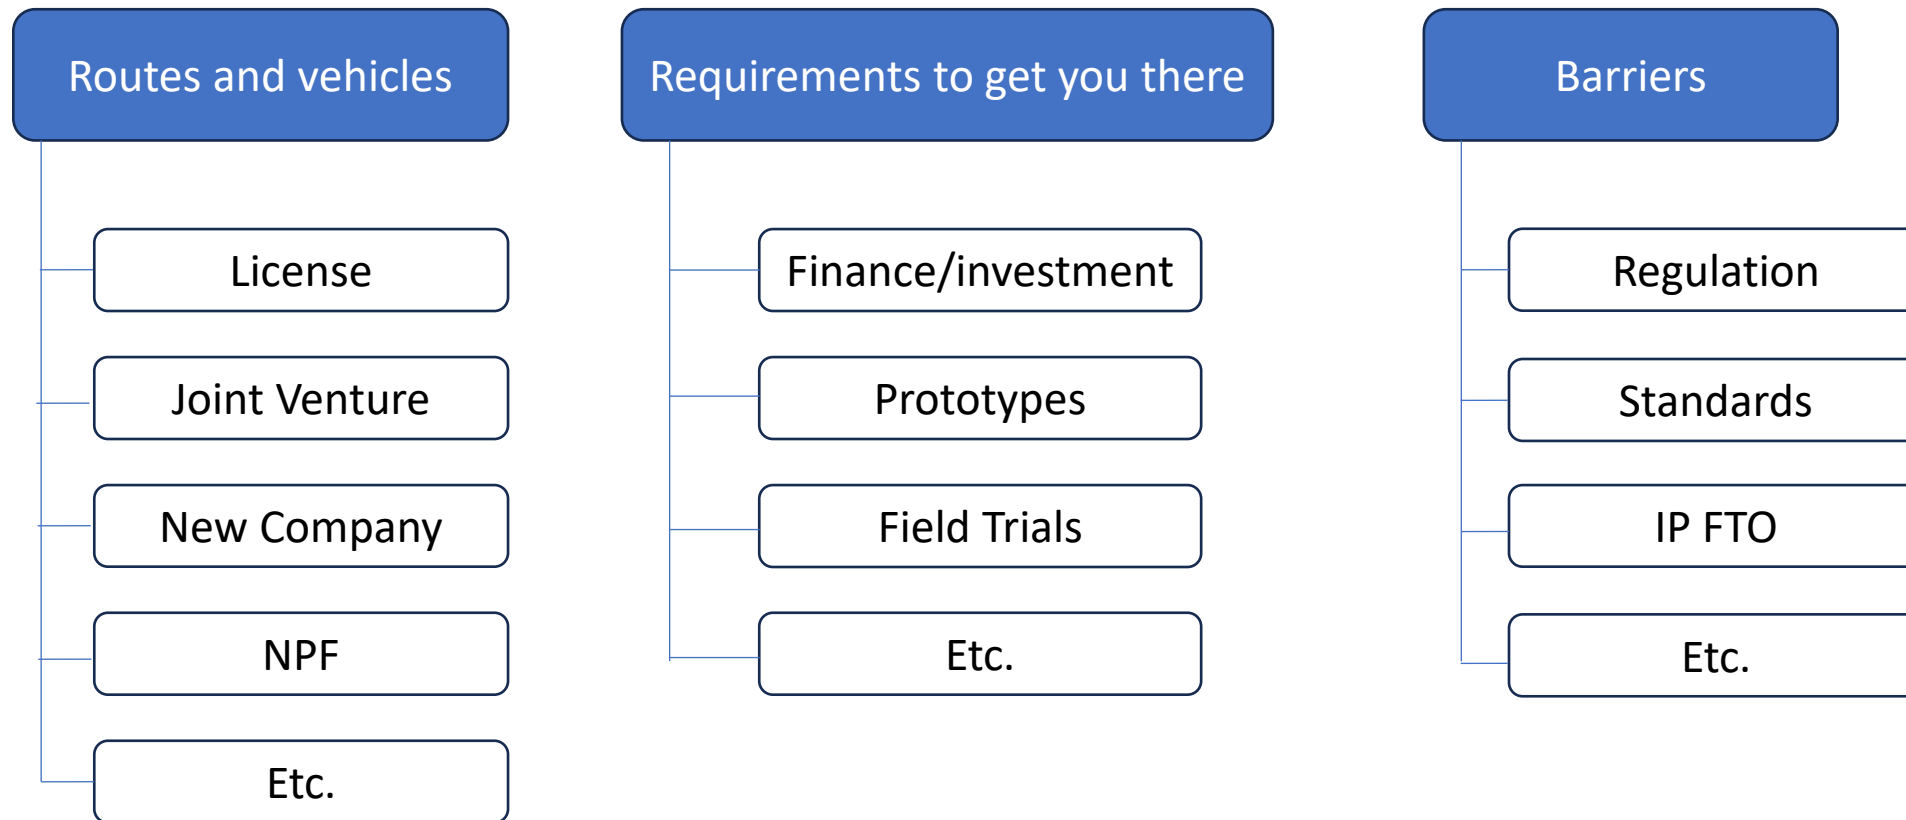

The Strategic Values of protected IP

- **Defend position**
- **Secure Market Share**
- **Protect products or services**
- **Create barriers to entry**
- **Enhance competitiveness**
- **Avoid litigation**

- **Generate New Revenues**
- **Access new technology**
- **Exploit new Markets**
- **Enhance Corporate Value**
- **Enhance competitiveness**
- **Develop Partnerships and licensing relationships**

Different routes to value creation

How startups and SMEs should think about IP: an investor's perspective

- Investors like to see that entrepreneurs have integrated IP rights into their business plans because IP assets often drive current and future revenues > **business owners need a basic understanding of how different IP rights can be used to advance business goals and how to secure them.**
- Investors want to see that a company has secured IP rights for all relevant assets and that management of its IP portfolio is fully aligned with its objectives and processes.
- Investors focus on due diligence and the need to ensure that companies own what they think or say they own and can use those assets as intended. They check whether appropriate **IP assignments** have been made; and **validate measures to protect trade secrets, infringement notices and other internal policies.**
- Companies should expect that the number of IP infringement claims against them will grow as their profile rises.
- IP assets increase corporate valuations or add significantly to the company's actual and perceived value. In the merger and acquisition context, they strengthen the exiting company's negotiating position.
- **Five common pitfalls:** (1) Open-source issues, (2) Trade secrets, (3) Managing and monitoring IP assets, (4) Timing is always a factor when implementing an IP strategy, (5) Companies with an eye on foreign markets should always carry out country-specific clearance searches to determine their freedom to operate in those markets

SME case studies

- EU IP Helpdesk brings real-life examples of IP management in different business settings, research fields or sectors.
- They trace the individual stories and learning curves experienced by innovative entrepreneurs and researchers.

Risks of disregarding IP

Watch out what's
worth to be
patented!

**Risks of
disregarding
Intellectual
Property**

Internal know
how can be lost

Be sure
not to use
anyone
else's IP!

Key takeaways

Be proactive in making your IP strategy central to your pre-launch business strategy.
Try to work on a plan before you've even spoken to your first real customers.

Seek the advice of a qualified IP professional to ensure your IP strategy is tailored to your specific situation and goals. **Sometimes, you can even get this advice for free.**
